Section Overview	2/2 - 2/5
Product Overview	2/6 - 2/7
SIRIUS Contactors	
3RT10 / 3RT20, 3-pole to 95A	
3RT10, 3-pole to 500A	
3RT12, 3-pole Vacuum to 500A	2/10
3RT13 / 3RT23, 4-pole with 4 NO	
3RT14, 3-pole for Resistive Loads	
3RT15 / 3RT25, 4-pole with 2 NO + 2 NC	
3RT26, for Capacitor Switching	
3RT20, Interface Coupling Contactors	
3RT20 Motor Contactors for DC Operation	
3RH21 Contactor Relays	
3RA13 / 3RA23 Reversing Contactors	. 2/37 - 2/44
3RT, 3TF Safety Contactors and	
3RH2, 3TH2 Safety Control Relays	
Function Modules for Communications	
3RA24, Wye-Delta Starting	
Contactor Coil Codes	2/49
SIRIUS Control Relays & Coupling Relays	

#### 05 Control ielays o Coup ıy selay

3RH2 Control Relays 2/5	50
3RH24 Latched Control Relays 2/5	
Auxiliary Switches	51
3RH21 Coupling Relays2/5	52

## Special Application Contactors (3TF6 / 3TB5 / 3TC)

3TF6 Vacuum Contactors up to 820A	2/53 - 2/54
3TC DC Switching Contactors	2/55 - 2/56
3TB5 Contactor Coils.	2/100 - 2/101

## **SIRIUS Contactor & Relay Accessories**

Special Application Contactor Accessories	
NEMA 1 Enclosures2	/93
Wye-delta Accessories	
Reversing Accessories	
Contactor Accessories	
Surge and EMC Suppressors2/73 - 2,	/74
AuxiliaryTime Delay and Latching Blocks 2/70 - 2,	/71
Auxiliary Switches	
Overview	/65

### Special Application Contactor Accessories

Auxiliary Contacts	2/53
Box Terminals and Covers	2/54
Surge Suppressors for 3TB, 3TC, 3TF	2/54

### **SIRIUS Contactor Spare Parts**

Coils	 
Arc Chutes	 
Contact Kits	 

Obsolete Contactor / Relay Spare Parts. . . 2/102 - 2/103

## **3RT1 SIRIUS Nomenclature**

3RT1	0	3	5	1	Α	B0	1
SIRIUS	Application	Frame	Current	Terminal	Coil Type	Coil Voltage	Aux Contacts A)
Contactor	0 = 3 pole Standard		Designation	1 = Screw	A = AC (S3)		0 = None
	2 = 3 pole Vacuum	4 = S3		2 = Spring Loaded	A = AC/DC (S6-S12)	Selection Chart page 2/49	1 = 1 NO (S3)
	3 = 4 pole NO	5 = S6	Choices =	3 = Spring Loaded	B = DC (S3)	page 2/49	2 = 1 NC (S3)
	4 = 3 pole resistive load	6 = S10	3,4,5,6	Coil only	N = UC Solid state		4 = 2NO + 2NC (S3-S12)
	5 = 4 pole 2 NO + 2 NC	7 = S12		6 = Busbar Terminal	(S6-S12)		5 = 1NO + 1 NC (S3-S12)
	6 = 3 pole Capacitive				P = UC Solid state		6 = 2 NO + 2 NC (S3-S12)
					with RLT (S6-S12)		A) per EN50012

## **3RT2 SIRIUS Innovations Nomenclature**

3RT2	0	1	5	1	Α	B0	1
SIRIUS	Application	Frame	Current	Terminal	Coil Type	Coil Voltage	Aux Contacts A)
Innovations	0 = 3 pole Standard	1 = S00	3,4,5,6,7,8	1 = Screw	A = AC (S00-S0)		0 = 1NO + 1NC (S0-S2)
Contactor	3 = 4 pole NO	2 = S0		2 = Spring Loaded	B = DC	Selection Chart	1 = 1 NO (S00)
	5 = 4 pole 2 NO + 2 NC	3 = S2		4 = Ring Lug	N = UC Electronic	page 2/49	2 = 1 NC (S00)
	6 = 3-pole Capacitive						4 = 2NO + 2NC (S00-S2)
							A) per EN50012

Note: MSPs and Contactors of the same frame size are made to easily fit together with the use of a link module or can be purchased pre-assembled as 3RA starter assemblies. See section 4.

Note: Contactors and Overloads of the frame size S00 - S3 are made to easily fit together without the use of accessories.

Note: This is only a guide to decode the model number. All possible combinations of these are not available.

1) All terminals are spring loaded on frame sizes S00 & S0. Only the coil terminals are spring loaded on frame sizes S2 & S3.

2) Max UL FLA = 60A at 460V

Note: Ring lug terminals are also available in size S00 & S0 contactors, except contactors with communication interface or UC coil. Change the 8th digit of the order number to a "4", e. g. 3RT2015-4AK61.

For further coil voltages, see page 2/49. For auxiliaries and accessories, see page 2/66-2/83. For spare parts, see page 2/94-2/99. For technical data, see page 2/121-2/142. For description, see page 2/104-2/105. For int. circuit diagrams, see page 2/190-2/197. For dimension drawings, see page 2/209-2/212.

For further vacuum contactors, 500Hp and 700Hp (3TF68/69), see page 2/53. For auxiliaries and accessories, see page 2/68. For spare parts, see page 2/98-2/99. For technical data, see page 2/152-2/157. For int. circuit diagrams, see page 2/196 For dimension drawings, see page 2/215.

#### Standards

IEC 60947-1. EN 60947-1 IEC 60947-4-1, EN 60947-4-1 IEC 60947-5-1, EN 60947-5-1 (auxiliary switches)

#### Design

The contactors are suitable for use in any climate. They are safe from touch to DIN VDE 0106, Part 100. The accessories for the 3-pole SIRIUS contactors can also be used for the 4-pole designs.

#### Mountable auxiliary contacts

Size S00: 4 auxiliary contacts of which up to 3 can be NC. Size S0 & S2: 4 additional auxiliary contacts up to 3 can be NC. Sizes S2 and S3: Up to 4 auxiliary contacts (either laterally mounted or snappped onto the top).

#### Contactor assemblies with mechanical interlock

The 4-pole 3RT13 / 3RT23 contactors with 4 NO contacts as the main contacts are suitable for making contactor assemblies with a mechanical interlock, e.g. for system transfers.

Size S00: Contactor assemblies can be made using two 3RT231. contactors in conjunction with the mechanical interlock and two connecting clips (Order No. 3RA2912-2H, pack comprising 10 interlocking elements and 20 clips for 10 contactor assemblies, see accessories on page 2/72).

## **Contactors for Special Applications**

3RT13 & 3RT23 contactors, 4-pole (4 NO contacts) for switching resistive loads (AC-1)

Size S0: In order to make 4-pole contactor assemblies using two 3RT232. contactors, the fourth pole of the left-hand contactor must always be moved to the left-hand side. The contactor assembly can then be made easily with the aid of the 3RA2922-2H mechanical interlock and connecting clip set fitted between the two contactors.

Sizes S2 and S3: Contactor assemblies can be made using two 3RT23 3 or 3RT13 4. contactors in conjunction with the laterally mountable mechanical interlock and the mechanical connectors. The mechanical interlock for fitting onto the front cannot be used for size S2 and S3 contactors.

#### Application

- Switching resistive loads
- · Isolating systems with unearthed or poorly earthed neutral conductors
- System transfers when alternative AC power supplies are used
- As contactors which only carry current and do not have to switch in case of inductive loads - e.g. variable-speed operating mechanisms
- ٠ Switching mixed loads in distribution systems (e.g. for supplying heaters, lamps, motors, PC power supply units) with p.f. > 0.8 according to IEC 60947-4-1, test conditions for utilization category AC-1

1) Size S00 and S0 contactors are also available with spring-type terminals. Replace the 8th digit of the order no. with a "2" e.g. "3RT23 16-2AK60"

2) Minimum conductor cross-section 8 AWG.

For further voltages, see page 2/49. For coil voltage tolerance, p. 2/49 For auxiliaries and accessories. see page 2/66-2/83. For spare parts, see page 2/94-2/99. For technical data, see page 2/166-2/167. For in. circuit diagrams, see page 2/191-2/196. For dimension drawings, see page 2/216.

## Contactors and Contactor Assemblies Contactors for Special Applications

### 3RT14, 3-pole for switching resistive loads (AC-1)

SIRIUS

### Application

AC and DC operation (size S3) UC operation (AC/DC) (sizes S6 to S12) IEC 60 947, EN 60 947 (VDE 0660) The contactors are suitable for use in any climate. They are safe from touch to DIN VDE 0106 Part 100. 3RT14 contactors are used for switching resistive loads. (AC-1) or as contactors, for example in variable-speed drives which normally only have to carry the current. The accessories for the SIRIUS 3RT10 contactors can also be used here.

## AC and DC operation

IEC 60 947-4-1/EN 60 947-4-1 (VDE 0660, Part 102)

#### Design

The contactors are suitable for use in any climate. They are safe to touch according to EN 50274. The accessories for the 3-pole SIRIUS contactors can also be used for the 4-pole designs.

## Contactors and Contactor Assemblies Contactors for Special Applications

3RT15 / 3RT25 contactors, 4-pole (2 NO + 2 NC contacts for switching motors

#### Mountable auxiliary contacts

#### Size S00 and S0:

4 auxiliary contacts, of which up to 4 can be NC contacts.

Size S2

Up to 4 auxiliary contacts (either laterally mounted or snapped onto the top; auxiliary switch blocks to EN 50 012 and EN 50 005)

#### Application

- Changing the polarity of hoisting gear motors
- Switching two separate loads from the same source

## **3RH21** contactor relays

## Overview

#### **DC** operation

IEC 60947-4-1, EN 60947-4-1, for requirements according to IEC 60077-1 and IEC 60077-2.

The contactor relays are finger-safe according to EN 50274. The size S00 contactor relays have spring-type connections for all terminals.

#### Ambient temperature

The permissible ambient temperature for operation of the contactor relays (across the full coil operating range) is -40 to +70  $^{\circ}\mathrm{C}.$ 

Uninterrupted duty at temperatures > +60 °C reduces the mechanical endurance, the current carrying capacity of the conducting paths and the switching frequency.

#### Control and auxiliary circuits

The solenoid coils of the contactor relays have an extended coil operating range from 0.7 to  $1.25 \times U_s$  and are fitted as standard with suppressor diodes to provide protection against overvoltage. The opening delay is consequently 2 to 5 ms longer than for standard contactors.

### Application

For operation in installations which are subject both to considerable variations in the control voltage and to high ambient temperatures, e. g. railway applications under extreme climatic conditions, rolling mills, etc.

Also for control supply voltages with battery buffer for longer operating times should the battery charging fail.

#### Contactor relays without series resistor

#### Control and auxiliary circuits

These contactor relays have an extended operating range from 0.7 to 1.25 x  $U_{\rm g}$ ; the solenoid coils are fitted with a suppressor diode. An additional series resistor is not required.

#### Note: An additional auxiliary switch block cannot be mounted.

#### Side-by-side mounting

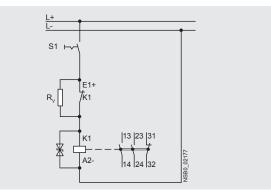

A clearance of 10 mm is required for side-by-side mounting at ambient temperatures > 60 °C  $\leq$  70 °C.

#### Contactor relays with series resistor

#### Control and auxiliary circuits

The DC solenoid systems of the contactor relays are modified (to hold-in coil) by means of a series resistor.

The size S00 contactor relays are supplied prewired with a plugon module containing the series resistor. The suppressor diode is integrated.

A 4-pole auxiliary switch block (according to EN 50005) can be fitted additionally.

#### Side-by-side mounting

Side-by-side mounting is permitted at ambient temperatures up to 70  $^\circ\text{C}.$

### 3RT20 motor contactors, 7.5 ... 25 HP

#### Overview

#### **DC** operation

IEC 60947-4-1, EN 60947-4-1, for requirements according to IEC 60077-1 and IEC 60077-2.

The contactors are finger-safe according to EN 50274. The contactors have spring-type connections as well as screw connections. The size S00 and S0 contactors have spring-type connections for all terminals.

#### Ambient temperature

The permissible ambient temperature for operation of the contactors (across the full coil operating range) is -40 to +70  $^{\circ}$ C.

Uninterrupted duty at temperatures > +60 °C reduces the mechanical endurance, the current carrying capacity of the conducting paths and the switching frequency.

#### Control and auxiliary circuits

The solenoid coils of the contactor relays have an extended coil operating range from 0.7 to 1.25 or 1.3 x  $U_{\rm s}$  and are fitted as standard with suppressor diodes. The opening delay is consequently 2 to 5 ms longer than for standard contactors.

#### Application

For operation in installations which are subject both to considerable variations in the control voltage and to high ambient temperatures, e. g. railway applications under extreme climatic conditions, rolling mills, etc.

Also for control supply voltages with battery buffer for longer operating times should the battery charging fail.

#### Contactors without series resistor

#### Control and auxiliary circuits

These contactors have an extended operating range from 0.7 to 1.25 x  $U_{\rm g}$ ; on size S00 the coils are fitted with suppressor diodes, on size S0 with varistors. An additional series resistor is not required.

#### Note:

#### An additional auxiliary switch block cannot be mounted.

#### Side-by-side mounting

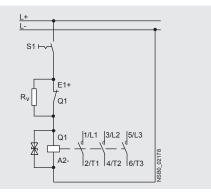

A clearance of 10 mm is required for side-by-side mounting at ambient temperatures > 60 °C  $\leq$  70 °C.

#### 3RT20 1. contactors with series resistor

#### Control and auxiliary circuits

The solenoid coils of the contactors have an extended coil operating range from 0.7 to 1.25 x  $U_{\rm s}$  and are fitted as standard with suppressor diodes to provide protection against overvoltage.

The DC solenoid systems of the contactors are modified (to holding excitation) by means of a series resistor.

The size S00 contactors are supplied prewired with a plug-on module containing the series resistor. The suppressor diode is integrated. A 4-pole auxiliary switch block (according to EN 50005) can be fitted additionally.

A circuit diagram showing the terminals is labeled on each contactor. One NC of the auxiliary contacts is required for the series resistor function. The selection and ordering data shows the number of additional, unassigned auxiliary contacts. With size S00 it is possible to extend the number of auxiliary contacts.

#### Side-by-side mounting

At ambient temperatures up to 70 °C, the size S00 contactors and contactor relays are allowed to be mounted side by side.

#### 3RT20 2. contactors with solid-state operating mechanism, extended operating range

#### Control and auxiliary circuits

The solenoid coils of the contactors have an extended coil operating range from 0.7 to 1.3 x  $U_{\rm s}$  and are fitted as standard with varistors to provide protection against overvoltage.

The contactors are energized via upstream control electronics which ensure the coil operating range of 0.7 to  $1.3 \times U_{\rm S}$  at an ambient temperature of 70 °C. They are supplied as complete units with integrated coil electronics. A varistor is integrated for damping opening surges in the coil.

The mounting possibilities for auxiliary switches correspond to those of the standard contactors for switching motors in the matching size (see page 2/58).

### Side-by-side mounting

Side-by-side mounting is permitted at ambient temperatures up to 70  $^{\circ}$ C for these contactor versions in size S0.

 Revised 10/22/15

This prevents disturbances in

the power system and welding

Only discharged capacitors are

charge chokes for parallel con-

permitted to be switched on

with capacitor contactors.

Recommendation: use dis-

nection with the capacitors.

of the contactors.

#### AC operation

IEC 60947-5, DIN EN 60947-5-1, (VDE 0660 Part 200)

The contactors are suitable for use in any climate and are finger safe per DIN EN 50274.

The 3RT26 capacitor contactors are application specific variants of the size S00 to S2 SIRIUS Innovations contactors. The capacitors are precharged by means of the mounted leading NO contacts and resistors; only then do the main contacts close.

## **Contactors and Contactor Assemblies Contactors for Special Applications**

### **3RT26** capacitor contactors

The capacitor contactors of size S00 contain either 1NO or 1NC in the basic unit and another unassigned NC contact in the auxiliary switch block fitted to the basic unit.

The auxiliary switch block which is snapped onto the capacitor contactor of sizes S0 contains the three leading NO contacts and one standard NO contact, which is unassigned.

The capacitor contactors of size S2 can be fitted additionally with a 2-pole auxiliary switch on the right side (2 NO, 2 NC or 1 NO + 1 NC), type 3RH19 21-1EA.. for lateral mounting.

For the capacitor making and breaking capacity of the basic 3RT20 contactor variant, see the technical data.

## Contactors and Contactor Assemblies Contactors for Special Applications

**3RT20** coupling contactors (interface) for switching motors, 3-pole

## AC and DC operation

IEC 60947, EN 60947. The 3RT20 coupling contactors for switching motors are tailored to the special requirements of working with electronic controls. The 3RT20 1 coupling contactors cannot be expanded with auxiliary switch blocks. Coupling contactors have a low power consumption and an extended solenoid coil operating range. Depending on the version, the solenoid coils are supplied either without overvoltage damping or with a diode, suppressor diode or varistor connected as standard.

## Contactors and Contactor Assemblies Contactors & Relays for Safety Applications

3RT, 3TF safety contactors and 3RH2, 3TH2 safety control relays

## • Revised • S 10/22/15

### Applications

#### "Safety" Contactors

Safety rated contactors are required to have mirrored contact construction according to IEC 60947-4-1 Annex F. A mirror contact is a Normally Closed (NC) auxiliary contact which can not be closed simultaneously with a Normally Open (NO) main contact.

In some industries, such as automotive, requirements have been established that a safety rated contactor must also have permanently mounted auxiliary contact blocks. See page 2/23 for Contactors with permanently mounted auxiliary contacts.

#### Siemens Contactors for "Safety" applications:

All Siemens standard 3RT, 3TF6, 40HN & 40PH Contactors are provided with positively driven (mirror) contacts which meet or exceed the criteria for "Safety Contactors" according to IEC 60947-4 Annex F which describes the requirements for mirror contact performance. When applying Safety Contactors in safety circuits, the NC auxiliary contacts must be wired in series or parallel and must be used as monitoring contacts with feedback to the safety evaluation device (i.e. safety relay or failsafe logic controller).

#### "Safety" Control Relays

Safety rated control relays are required to have positively driven contact elements according to IEC 60947-5-1 Annex L. Positively driven contact elements are a combination of NO auxiliary contacts and NC auxiliary contacts whose construction prevents them from being closed simultaneously.

In some industries, such as automotive, requirements have been established that a safety rated control relays must also have permanently mounted auxiliary contact blocks. See page 2/18 for Control Relays with permanently mounted auxiliary contacts.

#### Siemens Control Relays for "Safety" applications:

All SIRIUS 3RH control relays (with at least 1 NC contact) meet or exceed the criteria for "Safety Control Relays" according to IEC 60947-5-1 Annex L. This is true for the basic 3RH relay with or without an additional auxiliary contact block.

## Contactors and Contactor Assemblies Contactors & Relays for Safety Applications

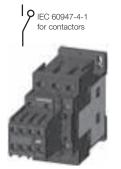

3RT safety contactors, 3RH2 safety control relays with permanently mounted auxiliary contact blocks

#### Application

Application

#### "Safety" Contactors

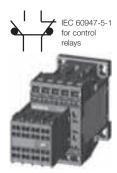

Safety rated contactors are required to have mirrored contact construction according to IEC 60947-4 Annex F. A mirror contact is a Normally Closed (NC) auxiliary contact which can not be closed simultaneously with a Normally Open (NO) main contact. In some industries, such as Automotive, the auxiliary contact blocks are required to be permanently attached to meet the requirements of "unitentional misuse" as specified in IEC 60292, paragraph 3.12. Tested by SUVA.

3RT202\* -1AK64-3MA0

#### "Safety" Control Relays

Safety rated control relays are required to have positively driven contact elements according to IEC 60947-5-1 Annex L. Positively driven contact elements are a combination of NO auxiliary contacts and NC auxiliary contacts whose construction prevents them from being closed simultaneously. In some industries, such as automotive, the auxiliary contact blocks are required to be permanently attached to meet the requirements of "unitentional misuse" as specified in IEC 60292, paragraph 3.12. Tested by SUVA.

24 V DC, integrated diode assy. FB4

DB4

For int. circuit diagrams, see page 2/190-2/196. For dimension drawings, see pages 2/209-2/215. 1) All terminals are spring loaded on frame size S00 and S0.

Only the coil and auxiliary contact terminals are spring loaded on frame sizes S2 & S3.

2) For AC-15/AC-14, max current for front mounted auxiliary contacts = 6 A.
 3) The 3RH22 control relays are also available with ring lug terminals. Replace the 8th digit of the order number with a "4", e. g. 3RH2244-4AK60

4) Max UL FLA = 65A at 460V

2/23

## **Contactors and Contactor Assemblies** Function Modules for Mounting onto SIRIUS 3RT2 Contactors

### Introduction

• Revised • 04/20/15

#### Overview

The function modules for mounting onto contactors enable the assembly of starters and contactor assemblies for direct-on-line, reversing and wye-delta starting without any additional, complicated wiring of the individual components. They include the key control functions required for the particular starter, e.g. timing and interlocking, and can be connected to the control system by either parallel wiring or through IO-Link or AS-Interface.

Version	SIRIUS function modules for parallel wiring	SIRIUS function modules for IO-Link <sup>1)</sup>	SIRIUS function modules for AS-Interface <sup>1)</sup>

- Use of the communication-capable function modules for IO-Link or AS-Interface requires contactors with communication interface (see pages 2/26).
- <sup>2)</sup> The modules for the control current wiring, which are included in the wiring kit, are not required.

Note:

When the function modules are used, no other auxiliary switches are allowed to be mounted on the basic units.

### Overview

Simply by being plugged in place, the SIRIUS function modules enable different functionalities required for the assembly of starters to be realized in the starter. The function modules and wiring kits help to reduce the wiring work within the starter practically to zero.

#### SIRIUS function modules for direct-on-line starting

The electronic timing relays which can be mounted onto the contactor are available in these versions:

- Sizes S00 and S0 for applications in the range from 24 to 240 V AC/DC (wide voltage range)
- Size S2 for applications in either the range from 24 to 90 V AC/DC or 90 to 240 V AC/DC

Both the electrical and mechanical connection are made by simple snapping on and locking.

A protection circuit (varistor) is integrated in each module.

The electronic timing relay with semiconductor output uses two contact legs to actuate the contactor underneath by means of a semiconductor after the set time t has elapsed.

The switching state feedback is performed by a mechanical switching state indicator (plunger). In addition, the auxiliary switches in the contactors are freely accessible and can be used for feedbacks to the control system or for signal lamps.

A sealable cover is available to protect against careless adjustment of the set times.

#### SIRIUS function modules for reversing starting

The wiring kits for reversing starters enable the cost-effective assembly of contactor assemblies. They can be used for all applications with reversing duty up to 50 HP. For a detailed description see page 2/37.

#### SIRIUS function modules for wye-delta starting

Both interlocking and timing functions are required for the assembly of wye-delta starters. With the function modules for wye-delta starting and the matching link modules for the main circuit, these starters can be assembled easily and with absolutely no errors.

The entire sequence in the control circuit is integrated in the snap-on modules. This covers:

- An adjustable wye time t from 0.5 to 60 s
- A non-adjustable dead interval of 50 ms
- Electrical contacting to the contactors by means of coil pick-off (contact legs)
- Feedback of the switching state at the contactor using a mechanical switch position indicator (plunger)
- · Electrical interlocking between the contactors

These modules do not require their own terminals and can therefore be used for contactors with both screw and spring-type terminals in the S00, S0 and S2. To start the wye-delta starter, only the first of the three contactors (line contactor) is actuated. All other functions then take place inside the individual modules.

This also offers advantages if the timing function was previously implemented in a controller, as it again results in a significant reduction in the number of PLC outputs, the programming work and the wiring outlay.

The kits for the main circuit include the mechanical interlock, the star jumper, the wiring modules at the top and at the bottom, and the required connecting clips.

A protection circuit (varistor) is integrated in the basic module.

## **SIRIUS function modules**

### Application

The snap-on function modules for direct-on-line starting are used above all for realizing timing functions independently of the control system.

With the OFF-delay variant of the timing relay it is possible for example for the fan motor for cooling a main drive to be switched off with a delay so that sufficient cooling after operation is guaranteed even if the plant and its control system have already been switched off.

The ON-delay timing relays enable for example the time-delayed starting of several drives so that the summation starting current does not rise too high, which could result in voltage failure.

The <u>function modules for wye-delta starting</u> are mostly used where current-limiting measures for starting a drive are required, e.g. for large fans and ventilators, and a high level of availability is essential at the same time. This technology has been used with success for several decades and has the additional advantage of requiring relatively little know-how. Through the use of function modules, the assembly work with simple standard components is even easier and error-free.

#### Benefits

The use of snap-on function modules for direct-on-line starting (timing relays) results in the following advantages:

- · Reduction of control current wiring
- Prevention of wiring errors
- · Reduction of testing costs
- Implementation of timing functions independently of the control system
- Less space required in the control cabinet compared to a separate timing relay
- No additive protection circuit required (varistor integrated)

The use of <u>function modules for wye-delta starting</u> results in the following advantages:

- Operation solely through the line contactor A1/A2 no further wiring needed
- Reduction of the control current wiring inside the contactor assembly and to the higher-level control system where applicable
- Prevention of wiring errors
- Reduction of testing costs
- Integrated electrical interlocking saves costs and prevents errors
- Less space needed in the control cabinet compared to using a separate timing relay
- Adjustable starting in star mode from 0.5 to 60 s
- Independent of the contactor's control supply voltage (24 to 240 V AC/DC)
- Varistor integrated no additive protection circuit required
- No control current wiring thanks to plug-in technology and connecting cables
- Mechanically coded assembly enables easy configuration and reliable wiring
- Fewer versions one module kit for screw and spring-type connection and for the two sizes S00 to S2
- Mechanical interlocking (with wiring kit for the main circuit)

## **Contactors and Contactor Assemblies**

#### Selection and ordering data

- · Ideal for diagnostics to the automation controller
- Quickly locate and rectify faults
- Configuration available in Step 7 and TIA Portal
- Easy engineering of parameters
- For DOL, reversing and wye delta starters up to 50 HP
- Manual starter operation with optional operator panel
- Reduces control wiring in the panel
- Available for 24VDC control systems
- Easily snap on IO-Link or AS-Interface modules onto contactors

1) All terminals are spring loaded in sizes S00 and S0.

For size S2, only the coil and aux contacts are spring loaded.

Communication capable contactors are ideal for starter feedback to the automation level. IO-Link starters in the cabinet save considerable wiring effort. AS-Interface is best suited for distributed systems.

For reversing contactors with communication capability, see pages 2/39-2/43

For accessories, see page 2/27, 2/30, 2/34.

For technical data, see page 2/31, 2/35, 2/36

For description, see page 2/24.

For further information on IO-Link and AS-Interface, see page 2/28-2/29 and 2/32-2/33.

### **SIRIUS function modules for IO-Link**

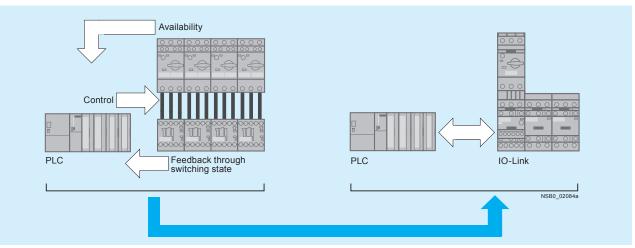

### Overview

The SIRIUS function modules for IO-Link enable the assembly of starters and contactor assemblies for direct-on-line, reversing and wye-delta starting without any additional, complicated wiring of the individual components. They include the key control functions required for the particular starter, e. g. timing and interlocking. The electrical and mechanical connection to the contactor is established by snapping on and locking. An additive protection circuit for the individual contactors can be dispensed with completely, and feedback from the contactor contacts is performed with Hall sensors which provide reliable feedback concerning the switching state even under extremely dusty conditions. The starters are connected to the higher-level

control system through IO-Link, with the possibility of connecting up to four starters as a group to one port of the IO-Link master.

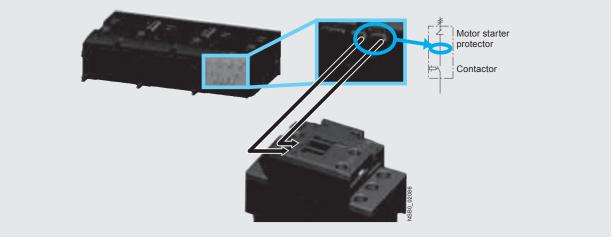

Through this type of connection to the control system, a maximum of wiring is saved. The following essential signals are transmitted:

- Availability of the starter in response to an indirect inquiry from the motor starter protector
- Starter operation
- · Feedback concerning the switching state of the starter

Signal transmission through IO-Link

The inquiry from the motor starter protector does not take place through additional wiring between the auxiliary switch and the module but by means of a voltage inquiry at the contactor input. This requires the use of communication versions of the contactors with communication interface (see page 2/26).

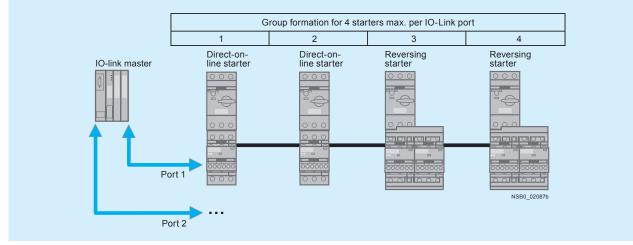

Availability signal through voltage pick-off

## Contactors and Contactor Assemblies Function Modules for Mounting onto SIRIUS 3RT2 Contactors

## **SIRIUS function modules for IO-Link**

By grouping up to four starters it is possible to connect up to 16 starters to one master of the ET200S. All the signals of the individual controls are made available through only 3 individual wires per starter group directly in the process image. If the potential at the master of the ET200S is the same as that of the controls, a further reduction in wiring is possible by providing the control supply voltage to the contactors by jumpering the corresponding communication wires.

#### Group formation with IO-Link

In case of a malfunction, the corresponding error signals are also sent directly to the PLC in acyclic mode. This is in addition to transmission of the switching signals and status signals.

Possible error signals:

- Device defect
- No main voltage (motor starter protector tripped)
- No control supply voltage
- Limit position on the right / on the left
- Manual mode
- · Process image fault

#### Application

The use of SIRIUS function modules with IO-Link is recommended above all in machines and plants in which there are several motor starters in one control cabinet. Using IO-Link, the connection of these starters to the automation level is easy, quick and error-free. And with IO modules no longer needed, the width of the ET200S becomes far smaller. This easy integration of the starters in the TIA world does not limit the flexibility in the field in the least. For example, all function modules have special terminals in order to enable direct local disconnection. These terminals can be connected for example to a position switch. The input interrupts the voltage supply to the contactor coil directly, i. e. without going through the PLC. These terminals are jumpered in the as-delivered state.

Local manual operation of the complete starter group is also straight-forward using a operator panel. The latter is easily connected to the last starter and can be built into the front panel of the control cabinet if required. This offers significant advantages particularly for commissioning.

### Benefits

- Reduction of the control current wiring to no more than one cable having three conductors for four starters
- Elimination of testing costs and wiring errors
- Reduction of configuration work
- · Integration in TIA for clear diagnostics if a fault occurs
- · Fewer IO modules saves space in the control cabinet
- All essential timing and interlocking functions for reversing duty and wye-delta starting are integrated
- No additional control circuit required

Further information on the application and benefits of the SIRIUS function modules for connection to the control system through IOLink can be found in Chapter 14 "Industrial Communication".

### SIRIUS function modules for AS-Interface

### Overview

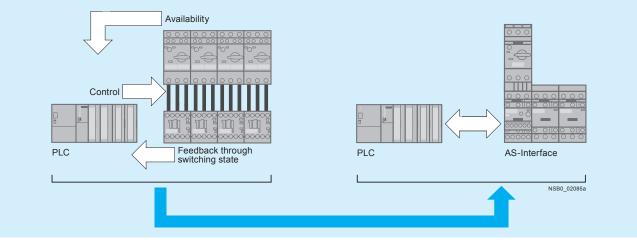

The SIRIUS function modules for AS-Interface enable the assembly of starters and contactor assemblies for direct-on-line, reversing and wye-delta starting without any additional, complicated wiring of the individual components. They include the key control functions required for the particular starter, e. g. timing and interlocking. The electrical and mechanical connection to the contactor is established by snapping on and locking. An additional control circuit for the individual contactors can be eliminated with completely because a varistor is integrated in the modules. Feedback from the contactor contacts is performed with Hall sensors which provide reliable feedback concerning the switching state even under extremely dusty conditions. Connection of the starters to the higher-level control system takes place through AS-Interface with the Specification V2.1 in A/B technology. As the result, up to 62 starters can be con-

nected to one master and the address is entered in normal manner with an addressing unit.

Through the AS-Interface connection to the control system, a maximum of wiring is saved. The wiring outlay is reduced to the control supply voltage and the two individual wires for AS-Interface.

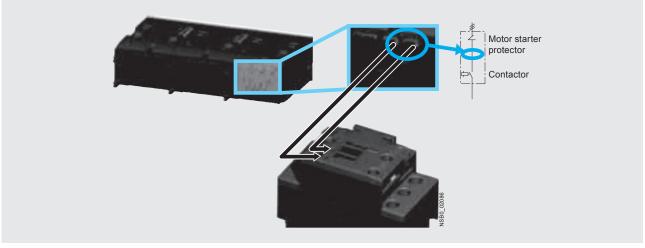

The following essential signals are transmitted:

- Availability of the starter in response to an indirect inquiry from the motor starter protector
- Starter operation
- · Feedback concerning the switching state of the starter

Signal transmission through AS-Interface

The inquiry from the motor starter protector does not take place through additional wiring between the auxiliary switch and the module but by means of a voltage inquiry at the contactor input. This requires use of communication versions of the contactors with communication interface (see page 2/26).

Availability signal through voltage pick-off

## SIRIUS function modules for AS-Interface

Addr 2a

AS-Interface

Topology with AS-Interface

This easy integration of the starters in the TIA world does not limit the flexibility in the field in the least. For example, all function modules have special terminals in order to enable direct local disconnection. These terminals can be connected for example,

Addr. 1a

to a position switch. The input interrupts the voltage supply to the contactor coil directly, i. e. without going through the PLC. These terminals are jumpered in the as-delivered state.

### Application

The use of SIRIUS function modules with AS-Interface is recommended above all in machines and plants requiring easy connection of several different sensors and actuators both inside and outside the control cabinet to the higher-level control system. And with IO modules no longer needed, the width of the PLC is far smaller.

### Benefits

101

Addr. 1b

- Reduction of control current wiring
- Elimination of testing costs and wiring errors
- Reduction of configuration work
- Elimination of IO modules saves space in the control cabinet
- All essential timing and interlocking functions for reversing duty and wye-delta starting are integrated
- No additional control circuit required

# Contactors and Contactor Assemblies Contactor Assemblies for Switching Motors

3RA reversing contactor assemblies

#### Design

# Complete equipment assemblies

The fully wired reversing contactor assemblies are suitable for use in any climate. They are safe from touch to EN 50274.

The contactor assemblies each consist of two contactors with identical ratings. The contactors are mechanically and electrically interlocked (NC contact interlock). The main and control circuits are wired according to the circuit diagrams on page 2/199.

For motor protection, either 3RU2 or 3RB3 overload relays for direct mounting or individual mounting or thermistor motor protection tripping units must be ordered separately.

# Components for customer assembly

Installation kits for all sizes are available for customer assembly of reversing contactor assemblies.

Contactors, overload relays, the mechanical interlock and — for momentary-contact operation — auxiliary switch blocks for latching must be ordered separately

The following points should be noted:

## Size S00

- For maintained-contact operation: use contactors with an NC contact in the basic unit for the electrical interlock.
- For momentary-contact operation:

use contactors with an NC contact in the basic unit for the electrical interlock; in addition, an auxiliary switch block with at least one NO contact for latching is required per contactor.

#### Size S0 and S2

Contactors come equipped with integrated 1 NO and 1NC aux contacts in each contactor. Both electrical interlocking and latching are satisfied with the integrated auxiliaries. Mechanical interlocking is required in either size and comes in the assembly kits except for size S2 where you need to order 3RA2934-2B interlock separately.

## Sizes S3

- For maintained-contact operation:
- the contactors have no auxiliary contact in the basic unit; NC contacts for the electrical interlock are therefore integrated in the mechanical interlock that can be mounted on the side of each contactor (one contact each for the left and right-hand contactors).
- For momentary-contact operation: the electrical interlock is the

same as for maintained-contact operation; in addition, an auxiliary switch with one NO contact for latching is required per contactor. This contact can be snapped onto the top of the contactors. Alternatively, auxiliary switch blocks mounted on the side can be used; they must be fitted onto the outside of each contactor. If the <u>front-mounted mechani-</u> <u>cal interlock</u> is used for size S2 to S3 contactors, two location holes for single-pole auxiliary switch blocks are provided on the front of each S2 contactor while three additional, single-pole auxiliary switch blocks can be snapped onto S3 contactors. The maximum auxiliary switch complements percontactorstatedonpage2/12 must not be exceeded.

When size S3 contactors are combined with a frontmounted mechanical interlock, the 3RA19 33-2B and 3RA19 43-2B installation kits cannot be used.

## Sizes S6 to S12

To insert the mechanical interlock, the prestamped location holes positioned opposite on the contactor must be knocked out. The internal auxiliary contacts (up to 1 NO + 1 NC per contactor) can be used for the electrical interlock and latching. The mechanical interlock itself does not contain any auxiliary contacts. Additional auxiliary contacts can be used on the outside and front (on the front in the case of 3RT10) of the reversing contactor assembly.

## Principle of operation

The operating times of the individual 3RT10/20 contactors are rated in such a way that no overlapping of the contact making and the arcing time between two contactors can occur on reversing, providing they are interlocked via their auxiliarv switches (NC contact interlock) and the operating mechanisms. An additional dead interval of 50 ms is necessary on reversing if the individual contactors are used at voltages > 500 V. The operating times of the individual contactors are not affected by the mechanical interlock.

## Surge suppression

#### Sizes S00 to S3

All contactor assemblies can be fitted with RC elements or varistors for damping opening surges in the coil.

As with the individual contactors, the surge suppressors can either be plugged onto the front of the contactors (SO0) or fitted onto the coil terminals on the top or bottom (S3). For sizes S0 and S2, the surge protection fits behind the hinged door on the front of the contactor and does not take up any additional space.

#### Sizes S6 to S12

The contactors are fitted with varistors as standard.

2

# **Contactors and Contactor Assemblies** Contactor Assemblies for Switching Motors

3RA13 and 3RA23 reversing contactor assemblies

## Overview

The 3RA13 and 3RA23 reversing contactor assemblies can be ordered as follows:

# Sizes S00 to S3

• Fully wired and tested, open type, with mechanical and electrical interlock. 1)

Sizes S00 to S12

• As components for customer assembly.

There is also a range of accessories (auxiliary switch blocks, surge suppressors, etc.) that must be ordered separately.

For overload relays for motor protection, see section 3.

The 3RA23 and 3RA13 contactor assemblies have screw connections and are available for screwing or snapping onto 35 mm standard mounting rails. The 3RA23 contactor assemblies are also available with spring-type terminals.

The @ and @ approvals only apply to the complete contactor assemblies and not to the components for customer assembly.

#### AC and DC operation

# Contactors and Contactor Assemblies 3RA24 Contactor Assemblies for Wye-Delta Starting

# 3RA24 complete units, 5.5 ... 22 kW

## Overview

These 3RA24 contactor assemblies for wye-delta starting are designed for standard applications.

#### Note:

Contactor assemblies for wye-delta starting in special applications such as very heavy starting or wye-delta starting of special motors must be customized. Help with designing such special applications is available from Technical Assistance.

The 3RA24 contactor assemblies for wye-delta starting can be ordered as follows:

#### Sizes S00 and S0

- Fully wired and tested, with electrical and mechanical interlock.
- · As individual parts for customer assembly.

A dead interval of 50 ms on reversing is already integrated in the function module for wye-delta starting.

There is also a range of accessories (lateral auxiliary switch blocks, etc.) that must be ordered separately.

For overload relays for motor protection see Chapter 3 "Overload Relays" --> "3RB3 Solid-State Overload Relays".

The 3RA24 contactor assemblies have screw or spring-type terminals and are suitable for screwing or snapping onto TH 35 standard mounting rails.

With the fully wired and tested 3RA24 contactor assemblies, the auxiliary contacts included in the basic devices are unassigned.

## Motor protection

Overload relays or thermistor motor protection releases can be used for overload protection.

The overload relay can be either mounted onto the line contactor or separately fitted. It must be set to 0.58 times the rated motor current.

#### Surge suppression

## Sizes S00 and S0

Surge suppression (varistor) is included in the function modules for wye-delta starting.

#### Function modules for wye-delta starting

The 3RA28 16-0EW20 wye-delta function module (see page 2/27 replaces the complete wiring in the control circuit and can be used in the voltage range from 24 to 240 V AC/DC. It is snapped onto the front of the contactor assembly size S00 or S0.

One function module comprises a complete module kit:

- One 3RA29 12-0 basic module with integrated control logic and time setting,
- And two 3RA29 11-0 coupling modules with related connecting cables.

The scope of supply comprises a complete module kit for one contactor assembly for wye-delta starting size S00 or S0, regardless of the connection method.

The selection of contactor types refers to fused configurations.

# Contactors and Contactor Assemblies 3RA24 Contactor Assemblies for Wye-Delta Starting

# 3RA24 complete units, 5.5 ... 22 kW

## Components for customer assembly

Assembly kits with wiring modules and mechanical connectors are available for contactor assemblies for wye-delta starting. Contactors, overload relays, function modules for wye-delta starting or wye-delta timing relays, auxiliary switches for electrical interlock – if required also feeder terminals and base plates – must be ordered separately.

The wiring kits for sizes S00 and S0 contain the top and bottom main conducting path connections between the line and delta

#### Screw terminals

contactors (top) and between the delta and star contactors (bottom).

Control circuit

Features:

- Time setting range 0.5 to 60 s (3 selectable settings)
- Wide voltage range 24 to 240 V AC/DC
- Dead interval of 50 ms, non-adjustable.

#### Notes:

For further voltages, see page 2/49. For accessories, see pages 2/66-2/77.

For technical data, see pages 2/185-2/188.

For overview, see page 2/116.

For position terminals, see page 2/202-2/203.

For dimension drawings, see page 2/124.

1)The 3RH21 contactor relays are also available with spring-type terminals. Replace the 8th digit of the order number with a "2" e.g. "3RH2140-2AB00"

2) The 3RH21 contactor relays are also available with ring lug terminals. Replace the 8th digit of the order number with a "4" e.g. "3RH2140-4AB00"

3)AC coil operating range at 50 Hz: 0.8 to 1.1 x U\_S at 60 Hz: 0.85 to 1.1 x U\_S

4)For AC-15/AC-14 the following applies:  $I_e = 6A$  for mounted auxiliary contacts.

• Revised • 09/30/14

3RH24 latched control relays, 4-pole

## Overview

The contactor coil and the coil of the release solenoid are both designed for uninterrupted duty.

The number of auxiliary contacts can be extended by means of front auxiliary switch blocks (up to 4 poles).

#### Selection and ordering data

Size S00 – Terminal designations according to EN 5001

RC elements, varistors diodes or diode assemblies can be fitted to both coils from the front for damping opening surges in the coil.

# Coupling Relays

3RH21 coupling relays for switching auxiliary circuits, 4 pole

# Application

**DC** operation IEC 60 947 and EN 60 947 The 3RH21 coupling relays for switching auxiliary circuits are tailored to the special requirements of working with electronic controls.

The 3RH21 coupling relays cannot be extended with auxiliary switch blocks.

Coupling relays have a low power consumption, an extended coil voltage tolerance and an integrated surge suppressor for damping opening surges on select versions

For accessories, see page 2/53-2/54.

For technical data, see page 2/172-2/177.

For description, see page 2/117.

For internal circuit diagrams, see page 2/211.

For position of terminals, see page 2/208

For dimension drawings, see page 2/221.

1) For further voltages, see page 2/102.

2) Surge suppression integrated: fitted with varistor.

3) For EMC, see description on page 2/11

3TF68/69 vacuum contactors are supplied with integrated surge suppression for the main conducting paths (for description, see page 2/117). In operation in circuits with DC choppers, frequency converters, variable-speed drives, for example, this protective circuitry is not required. It might be damaged by voltage peaks and harmonics generated, possibly followed by phase-to-phase shortcircuits. For this reason, the contactors can be supplied without overvoltage damping. To order these versions add a "-Z" and the order code "A02'

# SIRIUS

## Overview

#### The SIRIUS family of controls

The SIRIUS modular system with its components for the switching, starting, protection and monitoring of motors and industrial systems stands for the fast, flexible and space-saving construction of control cabinets.

#### 1 Contactor size S00

- 2 1-pole auxiliary switch block, laterally mountable
- 3 1-pole auxiliary switch block, for snapping onto the front Cable entry from the top
- 4 2-pole auxiliary switch block, for snapping onto the front Cable entry from the bottom
- 5 4-pole auxiliary switch block, for snapping onto the front
- 6 3RA28 function module
- 3RA27 function module for AS-Interface, direct starting
- 8 3RA27 function module for IO-Link, direct starting
- 9 Surge suppressor with/without LED
- 10 Three-phase feeder terminal

## For accessories see pages 2/66 to 2/83.

For contactor assemblies see pages 2/40 to 2/47.

For assembly kit for reversing contactor assemblies (mech. interlocking, wiring modules) see page 2/81.

- 1 Star jumper, 3-pole, without connecting terminal
- 12 Link for paralleling, 3-pole, with connecting terminal
- Wiring modules, on the top and bottom (reversing duty)
- 14 Solder pin adapter
- (5) Connection module (adapter and connector) for contactors with screw-type connection
- 16 Safety main current connector for two contactors

For contactors

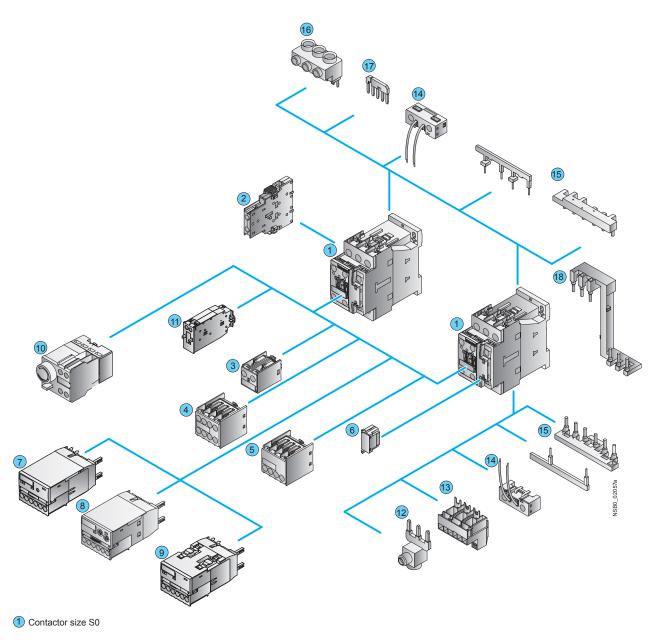

For contactors and coupling contactors (interface)

For mountable overload relays see Chapter 3, Overload Relays

For Motor Starters see Chapter 4, Combination Starters

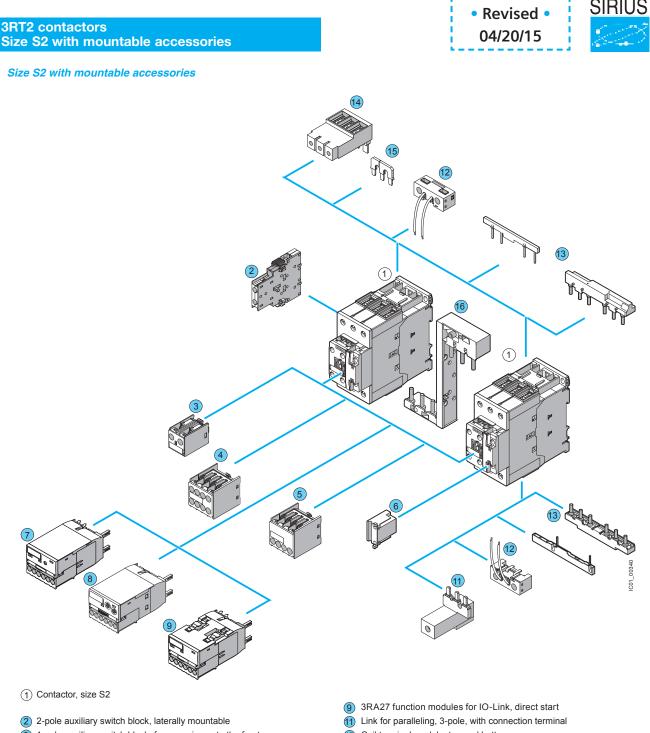

## **3RT2** contactors and coupling relays Size S0 with mountable accessories

- 2 1-pole auxiliary switch block, laterally mountable
- I-pole auxiliary switch block, for snapping onto the front Cable entry from the top
- 4 -pole auxiliary switch block, for snapping onto the front
- (5) 2-pole auxiliary switch block, for snapping onto the front Cable entry from the bottom
- 6 Surge suppressor with/without LED
- 7 3RA27 function module for AS-Interface, direct starting
- 8 3RA28 function module
- 9 3RA27 function module for IO-Link, direct starting
- 10 Pneumatic delay block

For accessories see pages 2/66 to 2/83.

- 1 Mechanical latching block
- 12 Link for paralleling, 3-pole, with connecting terminal
- (3) Connection module (adapter and plug) for contactors with screw-type connection
- (4) Coil terminal module, on the top and bottom
  - (15) Wiring modules, on the top and bottom (reversing duty)
  - Three-phase feeder terminal
  - 17
  - Link for paralleling (star jumper), 3-pole, without connecting terminal
  - Safety main current connector for two contactors 18

- 1-pole auxiliary switch block, for snapping onto the front, cable entry from above
- 4-pole auxiliary switch block, for snapping onto the front
   2-pole auxiliary switch block, for snapping onto the front, cable entry from below
- 6 Surge suppressor with/without LED
- (7) 3RA27 function modules for AS-Interface, direct start
- 8 3RA28 function modules

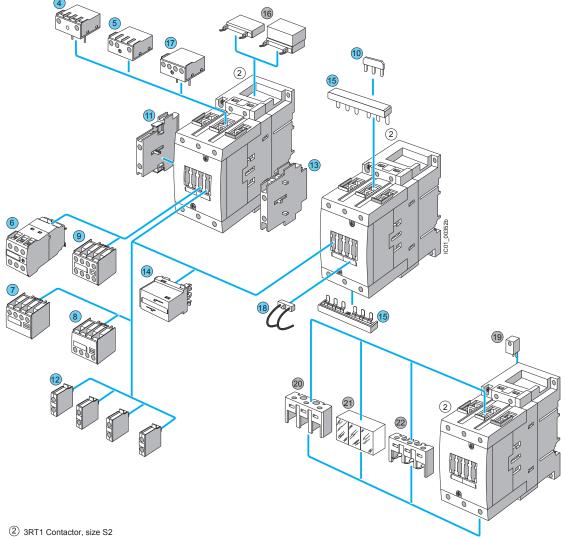

Accessories see pages 2/66 to 2/81.

- 12 Coil terminal module, top and bottom
- (13) Wiring modules, top and bottom (reversing duty)
- 3-phase feeder terminal
- Link for paralleling (star jumper), 3-pole, without connection terminal
- (6) Safety main current connector for two contactors

## **3RT1** contactors Size S3 with mountable accessories

Size S3 with mountable accessories

- 3 3RT1 Contactor, size S3

#### For sizes S2 and S3:

- 4 Electronic timing relay block, ON-delay
- Electronic timing relay block, OFF-delay 5
- Auxiliary switch block, solid-state time-delay 6 (ON or OFF-delay or wye-delta function)
- $\overline{7}$ 2-pole auxiliary switch block, cable entry from above
- 8 2-pole auxiliary switch block, cable entry from below
- 9 4-pole auxiliary switch block (terminal designations according to EN 50012 or EN 50005)
- Link for paralleling (star jumper), 3-pole, without connecting terminal 10
- 1 Link for paralleling, 3-pole, with connecting terminal
- 2-pole auxiliary switch block, laterally mountable left or right (terminal designations according to EN 50012 or EN 50005)
- 3 Single-pole auxiliary switch block (up to 4 can be snapped on)
- (14) Mechanical interlock, laterally mountable
- Mechanical interlock, mountable to the front 15
- Wiring connectors on the top and bottom (reversing duty) 16

Accessories see pages 2/66 to 2/81.

- Surge suppressor (varistor, RC element, diode assembly), can be mounted on the top or bottom
- 18 Mechanical latching interface for mounting directly onto contactor coil
- 19 LED module for indicating contactor operation
- Only for size S2:
- 20 Mechanical latching

## Only for sizes S2 and S3:

2) Coil repeat terminal for making contactor assemblies 2 Terminal cover for box terminal

#### Only for size S3:

- 23 Terminal cover for cable lug and bar connection
- 24 Auxiliary conductor terminal, 3-pole

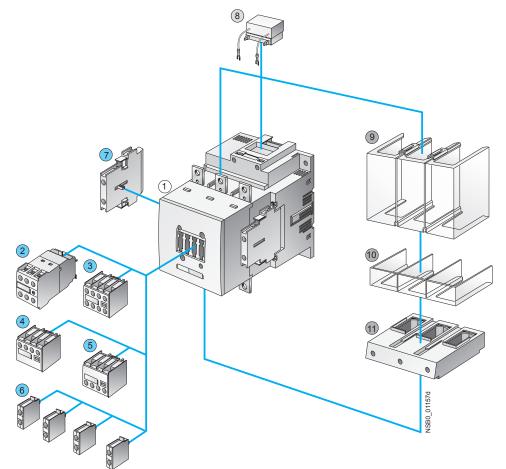

Accessories identical for sizes S2 and S3 Accessories differ according to size

Motor Starters see Chapter 4 Combination Starters & Starters for group installation

## 3RT1 contactors Sizes S6 to S12 with mountable accessories

(illustration for basic unit)

(1) 3RT10 and 3RT14 air-break contactors, sizes S6, S10 and S12

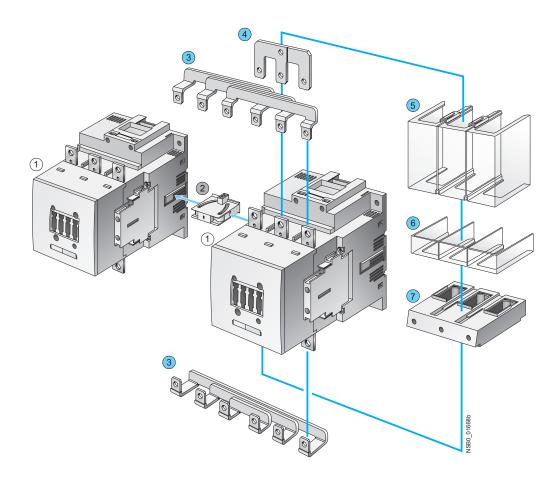

- 2 Auxiliary switch block, solid-state time-delay (ON or OFF-delay or wye-delta function)
- 3 4-pole auxiliary switch block
- (terminal designations according to EN 50012 or EN 50005)
- 2-pole auxiliary switch block, cable entry from above
- 5 2-pole auxiliary switch block, cable entry from below
- 6 Single-pole auxiliary switch block (up to 4 can be snapped on)
- 2-pole auxiliary switch block, laterally mountable left or right (terminal designations according to EN 50012 or EN 50005) (identical for S0 to S12)
- 8 Surge suppressor (RC element) for plugging into top of withdrawable coil

For accessories see pages 2/66 to 2/83.

For mountable overload relays see Chapter 3, "Overload Relays".

- (9) Terminal cover for cable lug and busbar connection, different for sizes S6 and S10/S12
- Terminal cover for box terminal, different for sizes S6 and S10/S12
- Box terminal block, different for sizes S6 and S10/S12
- Accessories identical for sizes S0 to S12
- Accessories identical for sizes S6 to S12
- Accessories differ according to size

1 3RT10 and 3RT14 air-break contactor, size S6

- 2 Mechanical interlock, laterally mountable
- 3 Wiring modules on the top and bottom 3RA1953-2A
- 4 Link for paralleling (star jumper), 3-pole, with through-hole, 3RT1956-4BA31
   5 Terminal cover for cable lug and bar connert
- (5) Terminal cover for cable lug and bar connection different for sizes S6 and S10/S12
  (6) Terminal cover for box terminal different for
- sizes S6 and S10/S12
- Box terminal block, different for sizes S6 and S10/S12

## For accessories see pages 2/66-2/83.

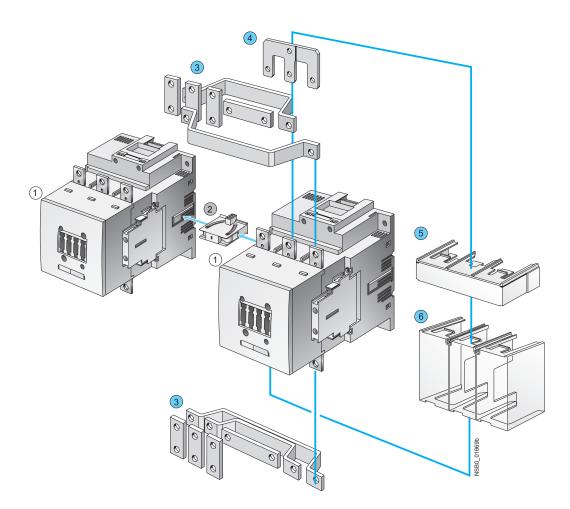

Mountable overload relays see Chapter 3, "Overload Relays".

Accessories identical for sizes S6 to S12
 Accessories differ according to size

**3RT1** contactors

Sizes S6, S10 and S12 with accessories

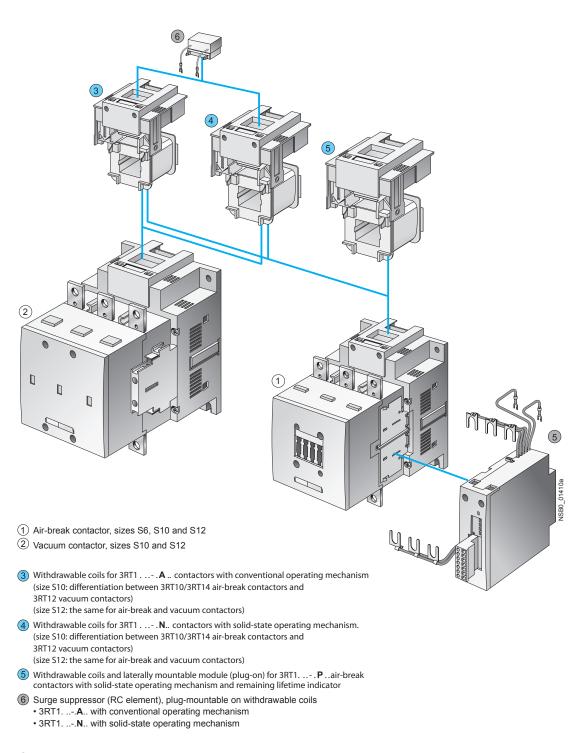

- (1) 3RT10 and 3RT14 air-break contactor, sizes S6, S10 and S12 or 3RT12 vacuum contactor, sizes S10 and S12
- 2 Mechanical interlock, laterally mountable
- 3 Wiring modules on the top and bottom, 3RA19
- 4 Link for paralleling (star jumper), 3-pole, with through-hole, 3RT19 56-4BA31
- (5) Terminal cover for box terminal,
- different for sizes S6 and S10/S12 Terminal cover for cable lug and busbar connection, different for sizes S6 and S10/S12 6

For accessories see pages 2/66-2/83.

For mountable overload relays see Chapter 3, "Overload Relays".

Accessories identical for sizes S6 to S12 Accessories different according to size

Identical for sizes S6 to S12
 Different according to size

For surge suppressors see page 2/73, withdrawable coils see page 2/98.

For mountable overload relays see Chapter 3, "Overload Relays".

EN50005 and EN50012 designate the markings of the auxiliary terminal numbers.

For position of the terminals see pages 2/202 -2/206. For int. circuit diagrams see pages 2/190-2/195.

 The 3RH29 11-.NF.. auxiliary switches are also available with ring lug terminal connection. The 8th digit of the order number must be replaced with "4", e. g.: 3RH2911-1NF11 -> 3RH2911-4NF11 2) Size S00 can be mounted according to EN 50012 only on basic units which have no integrated NC contact. 2

For technical data, see pages 2/182-2/183. For int. circuit diagrams, see page 2/198. For position of terminals, see page 2/206.

When the solid-state time-delay auxiliary switches are used, no other auxiliary switches are allowed to be mounted on the basic units. 1) AC voltage values apply for 50 Hz and 60 Hz.

- 2) Cannot be fitted onto coupling relays.
- 3) Setting of output contacts in as-supplied state not defined (bistable relay). Application of the control supply voltage once results in contact change-over to the correct setting.
- 4) Terminals A1 and A2 for the rated control supply voltage of the solid-state time-delay auxiliary switch must be connected to the associated contactor by means of connecting leads.
- Position of the output contacts not defined in the as-delivered state (bistable relay). Applying the control voltage once results in the contacts switching to the correct position.

### Contactor Assemblies for Switching Motors

### **Current Monitoring Relays**

### Overview

### Benefits

SIRIUS 3RR2242, 3RR2142 and 3RR2243 current monitoring relays

The SIRIUS 3RR2 current monitoring relays are suitable for the load monitoring of motors or other loads. In two or three phases they monitor the rms value of AC currents for overshooting or undershooting of set threshold values.

Whereas apparent current monitoring is used above all in connection with the rated torque or in case of overload, the active current monitoring option can be used to observe and evaluate the load factor over a motor's entire torque range.

The 3RR2 current monitoring relays can be integrated directly in the feeder by mounting onto the 3RT2 contactor; separate wiring of the main circuit is therefore superfluous. No separate transformers are required.

For a line-oriented configuration or simultaneous use of an overload relay, terminal supports for stand-alone installation are available for separate standard rail mounting.

### Versions

### **Basic versions**

The basic versions with two-phase apparent current monitoring, a CO contact output and analog adjustability provide a high level of monitoring reliability especially in the rated and overload range.

### Standard versions

The standard versions monitor the current in three phases with selectable active current monitoring. They have additional diagnostics options such as residual current monitoring and phase sequence monitoring, and they are also suitable for monitoring motors below the rated torque. These devices have an additional independent semiconductor output, an actual value indicator, and are digitally adjustable.

Both versions are available optionally with screw or spring-type terminals, in each case for sizes S00 and S0. With variants of size S2 the main current paths always have screw terminals; the control current side can have screw or spring-type terminals.

### Note:

In addition to the features of the standard versions, 3RR24 monitoring relays for mounting onto 3RT2 contactors for IO-Link also offer the possibility of transmitting the measured values and diagnostics data to a controller via an IO-Link. Furthermore, the devices can be parameterized on the devices themselves or via IO-Link.

- Can be mounted directly on 3RT2 contactors and 3RA23 reversing contactor assemblies, in other words, there is no need for additional wiring in the main circuit
- Optimally coordinated with the technical characteristics of the 3RT2 contactors
- No separate current transformer required
- Versions with wide voltage supply range
- Variably adjustable to overshoot, undershoot or range monitoring
- Freely configurable delay times and RESET response
- Display of ACTUAL value and status messages
- All versions with removable control current terminals
- All versions with screw terminals or spring-type terminals
- Simple determination of the threshold values through direct reference to actually measured values for setpoint loading
- Range monitoring and selectable active current measurement mean that only one device for monitoring a motor is required along the entire torque curve
- In addition to current monitoring it is also possible to monitor for broken cables, phase failure, phase sequence, residual current and motor blocking

### Application

- · Monitoring of current overshoot and undershoot
- Monitoring of broken conductors
- Monitoring of no-load operation and load shedding, e.g. in the event of a torn V-belt or no-load operation of a pump
- Monitoring of overload, e.g. on conveyor belts or cranes due to an excessive load
- Monitoring the functionality of electrical loads such as heaters
- Monitoring of wrong phase sequence on mobile equipment such as compressors or cranes
- Monitoring of high-impedance faults to ground, e.g. caused by damaged insulation or moisture

### Contactor Assemblies for Switching Motors

### **Current Monitoring Relays with IO-Link**

### Overview

SIRIUS 3RR2441, 3RR2442 and 3RR2443 current monitoring relays

The SIRIUS 3RR24 current monitoring relays for IO-Link are suitable for the load monitoring of motors or other loads. In three phases they monitor the rms value of AC currents for overshooting or undershooting of set threshold values.

Whereas apparent current monitoring is used above all in connection with the rated torque or in case of overload, the active current monitoring option, which is also selectable, can be used to observe and evaluate the load factor over a motor's entire torque range.

The 3RR24 current monitoring relays for IO-Link can be integrated directly in the feeder by mounting onto the 3RT2 contactor; separate wiring of the main circuit is therefore superfluous. No separate transformers are required.

For a line-oriented configuration or simultaneous use of an overload relay, terminal supports for stand-alone installation are available for separate standard rail mounting.

The SIRIUS 3RR24 current monitoring relays for IO-Link also offer many other options based upon the monitoring functions of the conventional SIRIUS 3RR2 monitoring relays:

- Measured value transmission to a controller, including resolution and unit, may be parameterizable as to which value is cyclically transmitted
- · Transmission of alarm flags to a controller
- Full diagnosis capability by inquiry as to the cause of the fault in the diagnosis data record
- Remote parameterization is also possible, in addition to or instead of local parameterization

• Rapid parameterization of the same devices by duplication of the parameterization in the controller

Revised
 04/20/15

- Parameter transmission by upload to a controller by IO-Link call or by parameter server (if IO-Link master from IO-Link Specification V 1.1 and higher is used)
- Consistent central data storage in the event of parameter change locally or via a controller
- Automatic reparameterizing when devices are exchanged
- Blocking of local parameterization via IO-Link possible
- Faults are saved in parameterizable and non-volatile fashion to prevent an automatic start up after voltage failure and to make sure diagnostics data is not lost
- By integration into the automation level the option exists of parameterizing the monitoring relay at any time via a display unit or displaying the measured values in a control room or locally at the machine/control cabinet

Even without communication via IO-Link the devices continue to function fully autonomously:

- Parameterization can take place locally at the device, independently of a controller
- In the event of failure or before the controller becomes available the monitoring relays work as long as the control supply voltage (24 V DC) is present
- If the monitoring relays are operated without the controller, the 3RR24 monitoring relays for IO-Link have, thanks to the integrated SIO mode, an additional semiconductor output, which switches when the adjustable warning threshold is exceeded

Thanks to the combination of autonomous monitoring relay function and integrated IO-Link communication, redundant sensors and/or analog signal converters – which previously took over the transmission of measured values to a controller, leading to considerable extra cost and wiring outlay – are no longer needed.

Because the output relays are still present, the monitoring relays increase the functional reliability of the system, since only the controller can fulfill the control tasks if the current measured values are available, whereas the output relays can also be used for the disconnection of the system if limit values that cannot be reached during operation are exceeded.

For further information on the IO-Link communication system, see Chapter 14.

### **Current Monitoring Relays with IO-Link**

### Benefits

- Can be mounted directly on 3RT2 contactors and 3RA23 reversing contactor assemblies, in other words, there is no need for additional wiring in the main circuit
- Optimally coordinated with the technical characteristics of the 3RT2 contactors
- No separate current transformer required
- Variably adjustable to overshoot, undershoot or range monitoring
- Freely configurable delay times and RESET response
- Display of ACTUAL value and status messages
- All versions with removable control current terminals
- All versions with screw or spring-type terminals
- Simple determination of the threshold values through direct reference to actually measured values for setpoint loading
- Range monitoring and selectable active current measurement mean that only one device for monitoring a motor is required along the entire torque curve
- In addition to current monitoring it is also possible to monitor for current unbalance, broken cables, phase failure, phase sequence, residual current and motor blocking
- Integrated counter for operating cycles and operating hours to support requirements-based maintenance of the monitored machine or application
- Simple cyclical transmission of the current measured values, relay switching states and events to a controller
- Remote parameterization
- Automatic reparameterizing when devices are exchanged
- Simple duplication of identical or similar parameterizations
- Reduction of control current wiring
- · Elimination of testing costs and wiring errors
- · Reduction of configuration work
- Integration in TIA means clear diagnostics if a fault occurs
- Cost saving and space saving in control cabinet due to the elimination of AI and IO modules as well as analog signal converters and duplicated sensors

- Application
- Monitoring of current overshoot and undershoot
- Monitoring of broken conductors
- Monitoring of no-load operation and load shedding, e.g. in the event of a torn V-belt or no-load operation of a pump
- Monitoring of overload, e.g. on pumps due to a dirty filter system
- Monitoring the functionality of electrical loads such as heaters
- Monitoring of wrong phase sequence on mobile equipment such as compressors or cranes
- Monitoring of high-impedance faults to ground, e.g. caused by damaged insulation or moisture

The use of SIRIUS monitoring relays for IO-Link is particularly recommended for machines and plant in which these relays, in addition to their monitoring function, are to be connected to the automation level for the rapid, simple and fault-free provision of the current measured values and/or for remote parameterization.

The monitoring relays can either relieve the controller of monitoring tasks or, as a second monitoring entity in parallel to and independent of the controller, increase the reliability in the process or in the system. In addition, the elimination of AI and IO modules allows the width of the controller to be reduced despite significantly expanded functionality.

**Contactors and Contactor Assemblies** 

Contactor Assemblies for Switching Motors

49SBLBF

For 3RT contactors, see page 2/8.

- For 3RA reversing, see pages 2/37.
- For thermal overloads, see page 3/10.

For solidstate overloads, see pages 3/22. For enclosure dimensions, see figures 1, 2, and 3 on page 9/150.

### **3RT Contactors**

Spare parts for 3RT2 contactors

### Selection and ordering data

For screw, spring-type and ring lug terminal connection

3RT29 24-5A.01

Note:

Contactors with AC and AC/DC coils have different depths. It is only possible to replace the coils on AC contactors with AC coils, and on AC/DC contactors with AC/DC coils. It is not possible to replace the coils on DC contactors in the S0 frame.

### For screw, spring-type and ring terminal lug connection

Due to the mature nature of some product series, supply cannot be guaranteed on all versions listed on this page.

1) Coil voltage tolerance at 220 V or 380 V: 0.85 to 1.15 x  $U_{\rm s}$ ; lower tolerance range limit acc. to IEC 60 947.

2) Lower tolerance range limit at 220 V: 0.85 x  $U_{\rm s}$  acc. to IEC 60 947.

Due to the mature nature of some product series, supply cannot be guaranteed on all versions listed on this page.

1) Maximum 4 blocks per relay.

### Contactors and Contactor Assemblies Contactors for Switching Motors

3RT contactors, 3-pole, sizes S00 to S3

### AC and DC operation

IEC 60 947, EN 60 947 (VDE 0660), UL 508

### Design

The 3RT contactors are suitable for use in any climate. They are safe from touch to DIN VDE 0106 Part 100.

The 3RT contactors are available screw, spring-type, or ring lug connections.

An auxiliary contact is integrated in the basic unit of size S00 contactors. The basic units of sizes S0 to S3 only contain the main conducting paths.

All the basic units can be extended with auxiliary switch blocks. Cabinet units with 2 NO + 2 NC (terminal designations acc. to EN 50 012) are available as of size S0; the auxiliary switch block is removable.

The size S3 contactors have removable box terminals for the main conductor connections. Ring cable lugs or bars can thus also be connected.

### Contact reliability

If voltages  $\leq$  110 V and currents  $\leq$  100 mA are to be switched, the auxiliary contacts of 3RT contactors and 3RH contactor relays should be used to ensure good contact stability.

These auxiliary contacts are suitable for electronic circuits with currents  $\geq$  1 mA at a voltage of 17 V.

### Short-circuit protection of contactors

For the short-circuit protection of contactors without an overload relay, see the technical data.

For the short-circuit protection of contactors with an overload relay, see section 3.

### Motor protection

3RU overload relays can be mounted onto the 3RT contactors for protection against overloads. The overload relays must be ordered separately (see section 3).

### Surge suppression

The 3RT contactors can be retrofitted with RC elements, varistors, diodes or diode assemblies (combination of an interference suppression diode and a Zener diode for short tripping times) for suppressing opening surges in the coil.

The surge suppressors are plugged onto the front of size S00 contactors. Space is provided for them next to a snapon auxiliary switch block.

With all size S0 to S3 contactors, varistors and RC elements can be plugged on directly at the coil terminals, either on the top or underneath. Diode assemblies are available in two different designs with different polarities. Depending on the application, they can be attached either only on the bottom (assembly with circuitbreaker) or only on the top (assembly with overload relay).

The plug-in direction of the diodes and diode assemblies is determined by a coding device. Exceptions: 3RT29 26-1E.00 and 3RT19 36-1T.00; in these cases the plug-in direction is identified by "+" and "-".

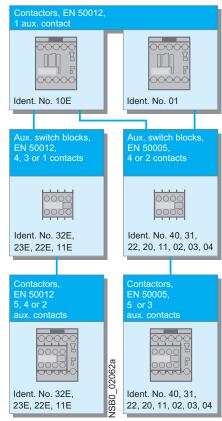

Coupling relays are supplied either without surge suppression or with a varistor or diode connected as standard, according to the design.

#### Note

The opening times of the NO contacts and the closing times of the NC contacts increase if the contactor coils are protected against voltage peaks (interference suppression diode 6 to 10 times; diode assemblies 2 to 6 times; varistor +2 ms to 5 ms).

### 3RT20 1. contactors (size S00),

Terminal designations acc. to EN 50 012 or DIN 50 005

### Auxiliary switch blocks

The 3RT basic units can be extended with various auxiliary switch blocks, depending on the application:

### Size S00 (3RT201)

Contactors with one NO contact as the auxiliary contact and with either screw or spring-type connections, identification number 10E, can be extended to obtain contactors with 2, 4 or 5 auxiliary contacts in accordance with EN 50 012 using auxiliary switch blocks. The identification numbers 11E, 22E, 23E and 32E on the auxiliary switch blocks apply to the complete contactors. These auxiliary switch blocks cannot be combined with contactors that have an NC contact in their basic unit, identification number 01, as these are coded.

All size S00 contactors with one auxiliary contact, identification number 10E or 01, and the contactors with 4 main contacts can be extended to obtain contactors with 3 or 5 auxiliary contacts (contactors with 4 main contacts: 2 or 4 auxiliary contacts) according to EN 50 005 using auxiliary switch blocks with identification numbers 40 to 02. The identification numbers on the auxiliary switch blocks apply only to the attached auxiliary contacts.

Single or 2-pole auxiliary switch blocks that can be connected on either the top or the bottom facilitate quick, straightforward wiring, especially when assembling feeders. These auxiliary switch blocks are only available with screw-type terminals.

The solid-state compatible 3RH29 11-1NF.. auxiliary switch blocks for size S00 contactors contain two enclosed contact elements. They are ideal for switching low voltages and currents (hard gold-plated contacts) or for use in dusty atmosphere. The contacts do not have positively-driven operation.

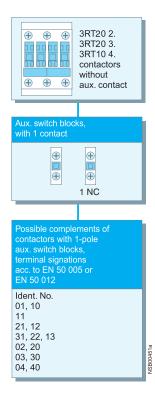

All the above-mentioned auxiliary switch variants can be snapped into the location holes on the front of the contactors. The auxiliary switch block has a centrally positioned release lever for disassembly.

### 3RT20 2. to 3RT10 4. contactors (sizes S0 to S3), single-pole auxiliary switch blocks,

terminal designations acc. to EN 50 005 or EN 50 012.

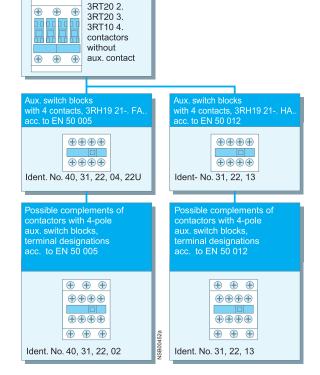

### Contactors and Contactor Assemblies Contactors for Switching Motors

### 3RT1/2 contactors, 3-pole, sizes S00 to S3

### 3RT20 2. to 3RT10 4. contactors (sizes S0 to S3), single-pole auxiliary switch blocks,

terminal designations acc. to EN 50 005 or EN 50 012.

## Sizes S0 to S3 (3RT202 to 3RT104)

An extensive range of auxiliary switch blocks is available for various applications. The contactors themselves do not have an integrated auxiliary conducting path.

## The auxiliary switch variants are identical for all size S0 to S3 contactors.

One 4-pole or up to four singlepole auxiliary switch blocks (with screw or spring-type connections) can be snapped onto the front of the contactors. When the contactors are energized, the NC contacts open before the NO contacts close.

The terminal designations of the single-pole auxiliary switch blocks consist of location digits on the basic unit and function digits on the auxiliary switch blocks.

In addition, 2-pole auxiliary switch blocks (screw-type terminals) are provided for cable entries from above or below in the style of a four-connector block (feeder auxiliary switch).

If the available installation depth is restricted, 2-pole auxiliary switch blocks (screw or spring-type connections) can be mounted laterally on the left or right.

The auxiliary switch blocks designed for mounting onto the front can be disassembled with the aid of a centrally positioned release lever; the laterally mountable auxiliary switch blocks can be removed easily by pressing on the fluted grips.

The terminal designations of the individual auxiliary switch blocks comply with EN 50 005 or EN 50 012, while those of the complete contactors with an auxiliary switch block with 2 NO + 2 NC comply with EN 50 012. The laterally mountable auxiliary switch blocks to EN 50 012 can only be used if no 4-pole auxiliary switch blocks are snapped onto the front. If single-pole auxiliary switch blocks are used in addition, the location digits on the contactor must be noted.

Two enclosed contact elements and two standard contact elements are available for the 3RH29 21-.FE22 solid-state compatible auxiliary switch block mountable on the front. The laterally mountable 3RH29 21-2DE11 solid-state compatible auxiliary switch block contains 2 enclosed contact elements (1 NO + 1 NC). The enclosed contact elements are ideal for switching low voltages and currents (hard goldplated contacts) or for use in a dusty atmosphere. The contacts are positively driven.

## Sizes S0 and S2 (3RT202 and 3RT203)

Up to four auxiliary contacts can be mounted, whereby any design of the auxiliary switch blocks is permitted. If two 2pole, laterally mounted, auxiliary switch blocks are used, one must be mounted on the left and one on the right for the sake of symmetry.

Under certain circumstances, more auxiliary contacts are allowed for size S2 (please ask for details).

With regard to 3RT13/23 and 3RT15/25 4-pole contactors, please refer to pages 2/12 to 2/14.

### Sizes S3 to S12 (3RT104 to 3RT107)

Up to eight auxiliary contacts can be mounted, whereby the following points must be noted:

- Of these eight auxiliary contacts, no more than four must be NC contacts.
- If laterally mounted auxiliary switch blocks are used, they must be symmetrical.

With regard to 3RT13 and 3RT15 4-pole contactors, please refer to pages 2/11 to 2/13. 3RT1 contactors, 3-pole, sizes S6 to S12

### Overview

- Design
- 3RT10 contactors for switching motors
- 3RT12 vacuum contactors for switching motors
- 3RT14 contactors for AC-1 applications

#### **Operating mechanism**

Two types of solenoid-operated mechanism are available:

- Conventional operating mechanism
- Solid-state operating mechanism (with 3 performance levels)

### UC operation

The contactors can be AC (40 to 60 Hz) and DC driven.

### Withdrawable coils

To allow easy coil changing, for example if the application is changed, the magnetic coil can be pulled out upwards without tools after the release mechanism has been actuated, and can be replaced by any other required coil of the same size.

### Auxiliary contact complement

The contactors can be equipped with a maximum of 8 auxiliary contacts, with identical auxiliary switch blocks from S0 to S12. Of these, no more than 4 are permitted to be NC contacts.

- 3RT10 and 3RT14 contactors: auxiliary contacts mounted laterally and on front
- 3RT12 vacuum contactors: auxiliary contact mounted laterallv

contactor switches reliably and

no thermal overloading occurs.

### Contactors with conventional operating mechanism

### 3RT1...-.A:

The magnetic coil is switched on and off directly with the control supply voltage  $U_{\rm s}$  via terminals A1/A2. Multi-voltage range for the control supply voltage U<sub>s</sub>: Several closely adjacent control supply voltages, available around the world, are covered by just one coil, for example UC 110-115-120-127 V or UC 220-230-240 V. In addition, allowance is also made for a coil voltage tolerance of 0.8 times the lower rated control supply voltage  $(U_{\rm s\ min})$  and 1.1 times the upper rated control supply voltage  $(U_{\rm s\ max})$ , within which the

### Contactors with solid-state operating mechanism

The power required for reliable switching and holding is supplied selectively to the magnetic coil by series-connected control electronics.

#### Features:

• Extended voltage range for the control supply voltage U<sub>s</sub>: Compared with the conventional operating mechanism, the solid-state operating mechanism covers an even broader range of globally available control supply voltages within one coil variant. For example, the globally available voltages 200-208-220-230-240-254-277 V are covered with the coil for UC 200 to 277 V (U<sub>s min</sub> to U<sub>s max</sub>). • Extended coil voltage tolerance 0.7 to  $1.25 \times U_s$ : On account of the broad range for the rated control supply voltage and the additionally allowed coil voltage tolerance of  $0.8 \times U_s$  min to  $1.1 \times U_s$  max, an extended coil voltage tolerance of at least 0.7 to  $1.25 \times U_s$ , within which the contactors will operate reliably, is available for the most common control supply voltages of 24, 110 and 230 V.

Bridging short-time voltage
 <u>dips:</u>

Control voltage failures dipping to 0 V (at A1/A2) are bridged for up to approx. 25 ms, therefore preventing unintentional disconnection.

### Defined ON and OFF thresholds:

As of voltages  $\ge 0.8 \times U_{s \min}$ the electronics reliably switch the contactor on and as of  $\leq 0.5 \times U_{s \min}$  it is reliably switched off. The differential travel in the switching thresholds prevents chattering of the main contacts and hence increased wear or welding when operated in weak, unstable networks. Similarly, thermal overloading of the contactor coil is prevented if the voltage applied is too low the contactor is not switched on and is operated with overexcitation.

- Low control power consumption when closing and in closed state.
- Conventional control by
- applying the control supply voltage at A1/A2 via a switching contact.

Note:

The sliding-dolly switch must be in the "PLC OFF" position (= setting ex works).

### Electromagnetic compatibility (EMC) The contactors with solid-state

operating mechanism conform to the requirements for operation in industrial plants.

### Noise immunity

- -Burst (IEC 61 000-4-4): 4 kV
- Surge (IEC 61 000-4-5): 4 kV
- Electrostatic discharge, ESD (IEC 61 000-4-2): 8/15 kV
   Electromagnetic field (IEC 61 000-4-3): 10 V/m
- Emitted interference Limiting value class A to

EN 55 011

### Note:

In connection with converters, the control cables should be installed separately from the load cables to the converter.

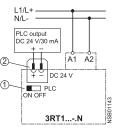

### 3RT1...-.N: for DC 24 V PLC output

### 2 control options:

 Control without an interface directly via a DC 24 V /≥ 30 mA PLC output (EN 61 131-2). Connection via a 2-pole plug-in connection; the connector, using screwless spring-force technology, is included in the scope of supply. The control supply voltage for supplying power to the solenoid operating mechanism must be connected to A1/A2.

#### Note:

Before start-up, the slidingdolly switch for PLC operation must be moved to the "PLC ON" position (setting ex works: "PLC OFF").

 Sliding-dolly switch, must be in PLC "ON" position

## **Contactors and Contactor Assemblies** Contactors for Switching Motors

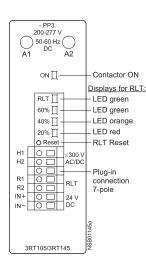

3RT1 contactors, 3-pole, sizes S6 to S12

### Overview

### Contactors with solid-state operating mechanism

3RT1...-.P: for DC 24 V PLC output or PLC relay output, with indication of remaining lifetime

### (Indication of remaining lifetime RLT: see 2/69.)

To supply power to the solenoid operating mechanism and the remaining lifetime indication, the control supply voltage  $U_{s}$ must be run to terminals A1/Å2 of the laterally mounted electronics module. The control inputs of the contactor are brought out to a 7-pole plug-in connection; the connector, using screwless spring-force technology, is included in the scope of supply.

### **3RT12 vacuum contactors**

In contrast with the 3RT10 contactors - the main contacts operate in air under atmospheric conditions - the contact gaps of the 3RT12 vacuum contactors are contained in hermetically enclosed vacuum contact tubes. Neither arcs nor arcing gases are produced. The particular benefit of 3RT12 vacuum contactors, however, is that their electrical endurance is at least twice as long as that of 3RT10 contactors.

• The remaining lifetime RLT status signal is available at terminals R1/R2 via a floating relay contact (hard goldplated, enclosed) and can be processed for example via SIMOCODE-DP or PLC inputs or elsewhere.

Permissible current carrying capacity of relay output R1/ R2

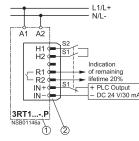

- I<sub>e</sub>/AC-15/24 to 230 V: 3 A - I /DC-13/24 V: 1 A
- LED indicators

The following statuses are indicated by LEDs on the laterally mounted electronics module:

- Contactor ON (energized) state):
- Green LED ("ON") Indication of remaining life-
- time (see 2/69)

### 2 control options:

• Contactor control without an interface directly via a DC 24 V /≥ 30 mA PLC output (EN 61 131-2) via terminals IN+/IN-.

Electronics module of 3RT1 ...-.P contactor

Plug-in connection, 7-pole Changeover switch from automatic control via PLC semi-

conductor output to local control

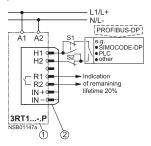

S2 Local control option

Possibility of switching from automatic control to local control via terminals H1/H2, i.e. automatic control via a PLC or SIMOCODE-DP/PROFIBUS-DP can be deactivated, for example during start-up or in the event of a fault, and the contactor can be controlled manually.

 Contactor control via relay outputs, e.g. by – Pİ C

- SIMOCODE-DP 3UF5 via terminals H1/H2. Contact loading: U<sub>s</sub>/approx. 5 mA

When operated via SIMO-CODE-DP, a communication link to PROFIBUS-DP is also provided.

Electronics module of 3RT1 .-.P contactor

Plug-in connection, 7-pole

Changeover switch from automatic control, e.g. via SIMOCODE-DP or PLC relay output to local control

S2 Local control option

They are therefore particularly well suited to frequent switching in jogging/mixed operation, for example in crane control systems.

### Advantages:

- Very long electrical endurance High short-time current-carrying capacity for heavy starting
- No open arcs, no arcing gases, i.e. no minimum clearances from earthed parts required either
- Longer maintenance intervals
- Increased plant availability

### Notes on operation:

Switching motors with rated operational voltages U > 500 V:

In order to damp overvoltages and protect the motor winding insulation against multiple reignition when switching off three-phase motors, it is recommended to fit the contactors on the outgoing side (T1/T2/T3) with the 3RT19 66-1PV. surge suppression module - RC varistor - (accessory).

This additional equipment is not required for operation in circuits with converters. It might be damaged by the voltage peaks and harmonics generated.

Switching DC voltage: Vacuum contactors are basically unsuitable for switching DC voltage.

### Contactors and Contactor Assemblies Contactor Assemblies for Switching Motors

Contactor assemblies for WYE-delta starting

### Overview

The contactor assemblies for star-delta starting can be ordered as follows:

Sizes S00-S0 as assemblies. (see pages 2/47-2/48)
Sizes S2-S12 as components for customer assembly

Calculated Size Accessories for customer assembly horsepower ratings at 460 V AC Operat.  Installation kit contains wiring connector on the bottom (connection between delta contactor and WYE contactor) and WYE jumper.

 Wiring connector on top from reversing contactor assembly (note conductor cross-sections). 5) A mechanical interlock adapter, 3RA1954-2C, is required to use the standard 3RA1954-2A mechanical interlock for the AC version of the S6-S6-S3 WYE-Delta starter. The S6-S6-S3 WYE-Delta DC version would require a special custom build spacer, which is not manufactured, to allow the mechanical interlock to operate.

6) Only use wiring connector on the top from reversing contactor assembly (note conductor cross-sections); order WYE jumper in addition.

Contactor assemblies for WYE-delta starting

#### Application

WYE-delta starting can only be used either if the motor normally operates in a  $\Delta$  (delta) connecand does not increase sharply. On the Ystep the motors can carry approximately 50% (class KL 16) or 30 % (class KL 10) of their rated torque; the starting torque is approximately 1/3 of that during direct on-line starting. The starting current is approximately 2 to 2.7 times the rated motor current.

The changeover from  $\Upsilon$  to  $\Delta$ must not be effected until the motor has run up to rated speed. Drives which require this changeover to be performed earlier are unsuitable for WYEdelta starting.

The ratings given in the above table are only applicable to motors with a starting current ratio of  $I_A \leq 8.4 \times I_N$  and using either a 3RT19 16-2G or 3RT19 26-2G solid-state time-delay auxiliary switch block with a WYE-delta function or a 3RP1574 WYEdelta time-delay relay with a dead interval of approximately 50 ms on reversing.

For the circuit diagrams for the main and control circuits, see page 2/161. The size selected for the installation kits for WYEdelta starting is determined by the line contactor.

#### Design

#### Components for customer assembly

Installation kits with wiring connectors and, if necessary, mechanical connectors are available for contactor assemblies for WYE-delta starting. Contactors, overload relays, star-delta time-delay relays and auxiliary switches for the electrical interlock - if required also feeder terminals, mechanical interlocks 1) and baseplates must be ordered separately.

The wiring installation kits for sizes S00 and S0 contain the top and bottom main conducting path connections between the line and delta contactors (top) and between the delta and WYE contactors (bottom).

In the case of sizes S2 to S12 only the bottom main conducting path connection between the delta and WYE contactors is included in the wiring connector, owing to the larger conductor cross-section at the infeed.

#### Motor protection

Overload relays or thermistor motor protection tripping units can be used for overload protection.

The overload relay can be either mounted onto the line contactor or separately fitted. It must be set to 0.58 times the rated motor current.

#### Surge suppression

#### Sizes S00 to S3

All contactor assemblies can be fitted with RC elements, varistors or diode assemblies for damping opening surges in the coil

As with the individual contactors, the surge suppressors can either be plugged onto the top of the contactors (S00) or fitted onto the coil terminals on the top or bottom (S0 to S3).

Sizes S6 to S12

The contactors are fitted with varistors as standard

tion or starts softly or if the load torque during  $\Upsilon$  starting is low

1) Exception: The mechanical interlock between the delta and WYE contactors is included in the installation kit for size S00 contactor assemblies.

Siemens Industry, Inc. Industrial Controls Catalog

For overview, see page 2/110.

### Contactors and Contactor Assemblies Control Relays, Coupling Relays

#### 3RH21 control relays, size S00 with 4 or 8 contacts

#### AC and DC operation

#### IEC 60947, EN 60947.

The 3RH2 contactor relays have screw, ring lug terminal or spring-type terminals. Four contacts are available in the basic unit.

The 3RH2 contactor relays are suitable for use in any climate. They are finger-safe according to EN 50274. The devices with ring lug terminal connection comply with degree of protection IP20 when fitted with the related terminal cover.

#### **Contact reliability**

High contact stability at low voltages and currents, suitable for solid-state circuits with currents  $\ge 1$  mA at a voltage of 17 V.

#### Surge suppression

RC elements, varistors, diodes or diode assemblies (combination of a diode and a Zener diode) can be plugged onto all contactor relays from the front for damping opening surges in the coil. The plug-in direction is determined by a coding device.

#### Note:

The OFF-delay of the NO contact and the ON-delay of the NC contact are increased if the contactor coils are attenuated against voltage peaks (noise suppression diode 6 to 10 times; diode assemblies 2 to 6 times, varistor +2 to 5 ms).

#### Auxiliary switch blocks

The 3RH2 contactor relays can be expanded by up to four contacts by the addition of snap-on auxiliary switch blocks.

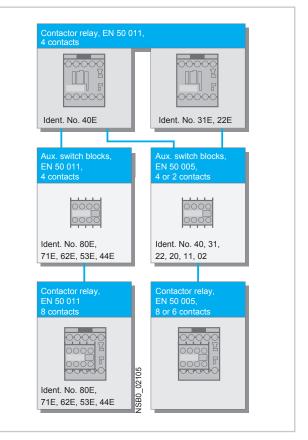

The auxiliary switch block can easily be snapped onto the front of the contactors. The auxiliary switch block has a centrally positioned release lever for disassembly.

The contactor relays with 4 contacts according to EN 50011, with the identification number 40E, can be extended with 80E to 44E auxiliary switch blocks to obtain contactor relays with 8 contacts according to EN 50011. The identification numbers 80E to 44E on the auxiliary switch blocks apply to the complete contactors. These auxiliary switch blocks (3RH29 11–1GA..) cannot be combined with contactor relays with identification numbers 31E and 22E; they are coded.

All contactor relays with 4 contacts according to EN 50011, identification numbers 40E to 22E, can be extended with auxiliary switch blocks 40 to 02 to obtain contactor relays with 6 or 8 contacts in accordance with EN 50005. The identification numbers on the auxiliary switch blocks apply only to the attached auxiliary switch blocks. In addition, fully mounted 3RH22 8-pole contactor relays are available; the mounted 4-pole auxiliary switch block in the 2nd tier is not removable. The terminal designations are according to EN 50011.

These versions are built according to special Swiss regulations SUVA and are distinguished externally by a red labeling plate.

Of the auxiliary contacts (integrated plus mountable) possible on the device, no more than four NC contacts are permitted.

#### 3RH24 latched control relays, size S00

#### Application

AC and DC operation IEC 60 947, EN 60 947 (VDE 0660) The terminal designations comply with EN 50 011.

The relay coil and the coil of the release solenoid are both designed for continuous duty.

The number of auxiliary contacts can be extended by means of auxiliary switch blocks (up to 4 poles). RC elements, varistors, diodes

or diode assemblies can be plugged onto both coils from the front for damping opening surges. The control relay can also

be switched on and released manually.

#### 3TF68 and 3TF69 vacuum contactors, 3-pole

#### Design

EN 60 947-4-1 (VDE 0660 Part 102).

The 3TF contactors are suitable for use in any climate. They are safe from touch according to DIN VDE 0106 Part 100. Terminal covers (see accessories) may have to be fitted onto the connecting bars, depending on the configuration with other devices.

#### Main contacts

#### **Contact erosion indication** with 3TF68/69 vacuum contactors

The contact erosion of the vacuum interrupters can be monitored in the closed position by means of three white double slides on the contactor base.

The vacuum interrupter must be replaced if the distance indicated by one of the double slides is less than 0.5 mm while the contactor is in the closed position.

It is advisable to replace all three interrupters in order to ensure maximum reliability.

#### **DC** operation

Retrofitting options: varistors.

#### Electromagnetic compatibility (EMC)

3TF68/69 ..-. C contactors for AC operation are equipped with an electronically controlled solenoid mechanism with a high level of immunity to interference (see table opposite).

#### Note:

In operation in installations where it is not possible to observe the emitted interference limits, e.g. as an output contactor in static frequency changers, use of 3TF68/69 .... Q contactors (NS E catalogue, available in German) is recommended, without a main conductor path circuit (for further information refer also to the description below).

#### Circuit of the main conducting paths

An integrated RC varistor circuit in the main conducting paths of the contactors damps the rate of rise of switching overvoltages to uncritical values. Multiple restriking of the switching arcs is thereby prevented.

The operator of an installation can thus assume that the danger to the motor winding arising from switching overvoltages with a high rate of rise is ruled out

The contactors can therefore be used without reservation for all AC switching applications, including three-phase motors with the demanding AC-4 utilization category.

#### Important note

The surge suppression circuit is not necessary when 3TF68/69 contactors are used in circuits with e.g. d.c. choppers, frequency converters or variablespeed drives.

It might be damaged by the voltage peaks and harmonics generated. This may also cause phase-to-phase short-circuits in the contactors

Remedy: Order the special contactor design without surge suppression. In this case the Order No. must be supplemented with "-Z" and the order code "A02". No additional charge is made.

#### Short-circuit protection of contactors

For assembling fuseless load feeders, please select a circuitbreaker/contactor combination according to the brochure entitled "Verbraucherabzweige in sicherungsloser Bauweise" Order No. E20001-P285-A726 (available in German only).

#### Solid-state, time-delay auxiliary switch box

The timer module, which is available in "ON-delay" and "OFF-delay" designs, allows time-delayed functions up to 100 s (3 distinct delay ranges).

It contains a relay with one NO contact and one NC contact; the relay is switched either after an ON-delay or after an OFF-delay.

The timer module with a WYE-DELTA function is equipped with one delayed and one instantaneous NO contact, with an interval time of 50 ms between the two (see diagram). The delay time of the NO contact can be set between 1.5 s and 30 s.

#### WYE-delta function

A1/A2		///////////////////////////////////////	a
Y 27/28		}	0453
∆37/38			<b>VSBO</b>
	<b>→</b> t →	🗲 50 ms	_

The contactor on which the solid-state, time-delay auxiliary switch block is mounted operates without a delay.

#### Size S00 (3RT201)

The solid-state, time-delay auxiliary switch block is fitted onto the front of the contactor. The timer module is supplied with power directly by plug-in contacts via the coil terminals of the contactor, in parallel with A1/A2. The time function is activated by closing the contactor on which the auxiliary switch block is mounted. The OFFdelay variant operates without an auxiliary power supply. Minimum ON period: 200 ms. A varistor is integrated in the timer module for damping opening surges in the contactor coil.

The solid-state, time-delay auxiliary switch block cannot be mounted on size S00 coupling relays.

### Sizes S0 to S12 (3RT202 to 3RT107)

The solid-state, time-delay auxiliary switch block is fitted onto the front of the contactor.

The timer module is supplied with power via two terminals (A1/A2); the time delay of the auxiliary switch block can be activated either by a parallel link to any contactor coil or by any power source.

The OFF-delay variant operates without an auxiliary power supply. Minimum ON period: 200 ms.

A single-pole auxiliary switch block can be snapped onto the front of the contactor in addition to the timer module.

The timer module has no integrated components for damping opening surges.

#### The timer module, which is available in "ON-delay" and "OFF-delay" with auxiliary power supply designs, allows time-delayed functions up to 100 s (3 distinct delay ranges). Contactors fitted with a timedelay block close or open after a delay according to the set time.

The ON-delay variant of the time-delay relay is connected in series with the contactor coil; terminal A1 of this coil must not be connected.

With the OFF-delay variant of the time-delay relay, the contactor coil is contacted directly via the relay; terminals A1 and A2 of the coil must not be connected.

The time-delay relays are suitable for both AC and DC operation.

#### Size S00 (3RT201)

The variant for size S00 contactors is fitted onto the front of the contactor (with the supply voltage switched off) and then slid into its latched position; at the same time, the time-delay relay is connected by means of plugin contacts to coil terminals A1 and A2 of the contactor. Any contactor coil terminals which are not required are sealed off by means of covers on the enclosure of the time-delay block, to prevent them from being connected inadvertently (for circuit diagrams, see page 2(149)

A varistor is integrated in the timer module for damping opening surges in the contactor coil.

The solid-state, time-delay block cannot be mounted on size S00 coupling relays.

### Sizes S0 to S3 (3RT202 to 3RT107)

The time-delay block for size S0 to S3 contactors is plugged into coil terminals A1 and A2 on top of each contactor; the time-delay relay is connected both electrically and mechanically by means of pins.

A varistor is integrated in the timer module for damping opening surges in the contactor coil.

#### Configuration note

Activation of loads parallel to the start input is not permitted with AC operation (see (a)).

The 3RT19 16-2D.../3RT19 26-2D... time-delay blocks with an OFF delay have a voltage-carrying start input B1. This means that if there is a parallel load on terminal B1, activation can be simulated with AC voltage. In this case, the additional load (e. g. contactor K3) must be wired as shown in <sup>(b)</sup>.

# Solid-state time-delay block with semiconductor output

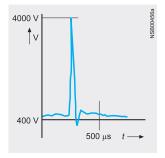

a

Time-delay block Contactor

A so-called backr-e.m.f. (electromotive force) is produced when motors or various inductive loads are turned off. Voltage peaks of up to 4 000 V may occur as a result, with a frequency spectrum from 1 kHz to 10 MHz and a rate of voltage variation from 0.1 to 20 V/ns.

The connection between the main conducting path and the EMC interference suppression module enables contact arcing, which is responsible for contact erosion and the majority of clicking noises, to be reduced; this in turn is conducive to an electromagnetically compatible design.

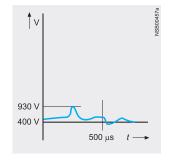

Since the EMC interference suppression module achieves a significant reduction in radiofrequency components and the voltage level in three phases, the contact endurance is also improved considerably. This makes an important contribution towards enhancing the reliability and availability of the system as a whole.

There is no need for fine graduations within each performance class, as smaller motors inherently have a higher inductance, so that one solution for all fixed-speed drives up to 7.5 HP is adequate.

### Contactors and Contactor Assemblies Accessories for 3RT / 3RH Contactors

3-phase EMC interference suppression module for size S00 contactor

950 V 400 V 500 μs t→

The varistor circuit is able to absorb high energy levels and is also suitable for frequencies from 10 to 400 Hz (variablespeed drives). There is no limiting below the knee-point voltage, however.

Two electrical variants are available:

The advantages of the <u>RC circuit</u> lie mainly in the reduction in the rate of rise and in its RF damping ability. The selected values ensure effective interference suppression over a wide range.

#### OFF-delay device for size S00 to S3 contactors

#### AC and DC operation

IEC 60 947, EN 60 947 For screwing and snapping onto 35 mm standard mounting rail. The OFF-delay devices have screw connections.

#### Application

The OFF-delay device prevents a contactor from dropping out unintentionally when there is a short-time voltage dip or voltage failure. It supplies the necessary power for a seriesconnected, DC-operated contactor during a voltage dip to ensure that the contactor does not open. The 3RT19 16/3RT29 16 OFF-delay devices are specifically designed for operation with the 3RT contactors and 3RH contactor relays of the SIRIUS series.

#### Principle of operation

The OFF-delay device operates without external voltage on a capacitive basis, and can be energized with either AC or DC (24 V version for DC operation only). Voltage matching, which is only necessary with AC operation, is performed using a rectifier bridge. A contactor opens after a delay when the capacitors of the contactor coil, built into the OFFdelay device, are switched in parallel. In the event of voltage failures, the capacitors are discharged via the coil and thereby delay the opening of the contactor.

If the command devices are upstream of the OFF-delay device in the circuit, the OFF delay takes effect with every opening operation. If the opening operation is downstream of the OFF-delay device, an OFF delay only applies in the event of failure of the mains voltage.

#### Operation

In the case of the versions for rated control supply voltages of 110 V and 230 V, either AC voltage or DC voltage can be applied on the line side, where as the variant for 24 V is designed for DC operation only.

A DC-operated contactor is connected to the output in accordance with the input voltage that is applied.

The mean value of the OFF delay is approximately 1.5 times the specified minimum time.

### **Contactors and Contactor Assemblies** Accessories for 3RT Contactors

#### Interface for mounting on size S0 to S3 contactors

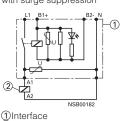

#### Application

#### **DC** operation

IEC 60 947 and EN 60 947 The interface is suitable for use in any climate. It is safe from touch to DIN VDE 0106 Part 100. The terminal designations conform to EN 50 005.

#### Terminal diagram

#### 3RH19/29 24-1GP1 with surge suppression

①Interface ②Contactor

#### Functions Design

System-compatible operation with DC 24 V, coil voltage tolerance 17 V to 30 V.

Low power consumption in con-formity with the technical data of the electronic systems. A light-emitting diode indicates the circuit state.

#### Surge suppression

The 3RH29 24-1GP11 interface has an integrated surge suppressor (varistor) for the contactor coil being switched.

#### Mounting

The 3RH29 24-1GP11 interface is mounted directly on the contactor coil.

Endurance of the auxiliary contacts

It is assumed that the operating mechanisms are switched randomly,

i. e. not synchronized with the phase angle of the supply system.

The contact endurance is mainly dependent on the breaking current.

The characteristic curves apply to: • Integrated auxiliary contacts on 3RT20 • Auxiliary switch blocks 3RH 29 11, 3RH29 21 for contactors size S00 and SO.

 $I_a = Breaking current$  $I_e = Rated operational current$ 

<sup>1)</sup> Integrated auxiliary contacts in size S0, auxiliary switches for snapping onto the front and for mounting onto the side in size S00 and S0:  $I_e = 6$  Å at AC-14/AC-15.

#### **3RT2 contactors**

#### Endurance of the main contacts

#### Size S00

The characteristic curves show the contact endurance of the contactors when switching resistive and inductive AC loads (AC-1/AC-3) depending on the breaking current and rated operational voltage. It is assumed that the operating mechanisms are switched randomly, i. e. not synchronized with the phase angle of the supply system.

The rated operational current  $I_e$  complies with utilization category AC-4 (breaking six times the rated operational current) and is intended for a contact endurance of at least 200,000 operating cycles.

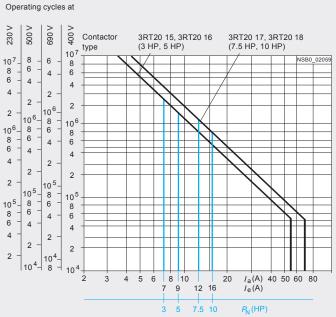

If a shorter endurance is sufficient, the rated operational current  $I_{\rm e}/{\rm AC}{\rm -4}$  can be increased.  $I_{\rm e}$ 

If the contacts are used for mixed operation, i. e. normal switching (breaking the rated operational current according to utilization category AC-3) in combination with intermittent inching (breaking several times the rated operational current according to utilization category AC-4), the contact endurance can be calculated approximately from the following equation:

$$X = \frac{A}{1 + \frac{C}{100} \left(\frac{A}{B} - 1\right)}$$

Characters in the equation:

- X Contact endurance for mixed operation in operating cycles
- A Contact endurance for normal operation ( $I_a = I_e$ ) in operating cycles
- B Contact endurance for inching ( $I_a$  = multiple of  $I_e$ ) in operating cycles
- C Inching operations as a percentage of total switching operations

<ul> <li>AWG cables, solid or stranded</li> </ul>	AWG	2 x (20 14)				
) If two different conductor cross-sections are connected to one clampin	a					

If two different conductor cross-sections are connected to one clamping point, both cross-sections must lie in one of the ranges specified.

<sup>2)</sup> Max. external diameter of the cable insulation: 3.6 mm. On spring-type terminals with conductor cross-sections ≤ 1 mm<sup>2</sup>, an insulation stop must be used, see Accessories, page 3/76.

 <sup>3)</sup> Tool for opening the spring-type terminals; see "Accessories", page 3/76.

For tool for opening the Cage Clamp connection, see on accessories page 2/79
An "insulation stop" must be used for conductor cross-sections ≤1 mm2, see accessories on page 2/79.
Max. outer diameter of conductor insulation: 3.6 mm.
For information about Cage Clamp connections, see Appendix page 19/17.

1) Only crimping cable lugs acc. to DIN 46 234

3RT10.5. contactors

#### Technical data

Contactor	Size Type			S6 3RT10 54	S6 3RT10 55	S6 3RT10 56	
General data							
Permissible mounting po The contactors are design on a vertical mounting surf	ed for operation			90° 90° 22.5° 22	2.5° 		
Mechanical endurance			Oper. cycles	10 million			
Electrical endurance							
Rated insulation voltage U <sub>i</sub> (pollution degree 3)				1000			
Rated impulse withstand voltage $U_{imp}$			kV	8			
Safe isolation between coil, auxiliary contacts and main contacts (acc. to DIN VDE 0106 Part 101 and A1 [draft 2/89])				690			
Positively driven operation There is positively driven of NO contacts cannot be cla	operation if the NC and			Yes, between main of the auxiliary switch b Annex H (draft 17B/S	locks acc. to ZH 1/-	ry NC contacts and with 457, IEC 60 947-4-1,

According to excerpt from IEC 60 947-4-1 (VDE 0660 Part 102): Type of coordination "1": Destruction of the contactor and the overload relay is permissible. The contactor and/or over-load relay must be replaced if necessary.

Type of coordination "2":

No damage can be tolerated to the overload relay, but contact welding on the contactor is permitted if the contacts can be easily separated. 2) Test conditions acc. to IEC 60 947-4-1.

Contactors for Switching Motors

1) According to excerpt from IEC 60 947-4-1 (VDE 0660 Part 102): Type of coordination "1":

Destruction of the contactor and the overload relay is permissible. The contactor and/or over-load relay must be replaced if necessary.

Type of coordination "2": No damage can be tolerated to the overload relay, but contact welding on the contactor is permitted if the contacts can be easily separated.

2) Test conditions acc. to IEC 60 947-4-1.

1) According to excerpt from IEC 60 947-4-1 (VDE 0660 Part 102):

Type of coordination "1": Destruction of the contactor and the overload relay is permissible. The contactor and/or over-load relay must be replaced if necessary.

Type of coordination "2": No damage can be tolerated to the overload relay, but contact welding on the contactor is permitted if the contacts can be easily separated.

2) Test conditions acc. to IEC 60 947-4-1.

1) According to excerpt from IEC 60 947-4-1 (VDE 0660 Part 102): Type of coordination "1": Destruction of the contactor and the overload relay is permissible. The contactor and/or over-

load relay must be replaced if necessary.

Type of coordination "2": No damage can be tolerated to the overload relay, but contact welding on the contactor is permitted if the contacts can be easily separated.

2) Test conditions acc. to IEC 60 947-4-1.

1) According to excerpt from IEC 60 947-4-1 (VDE 0660 Part 102):

Type of coordination "1": Destruction of the contactor and the overload relay is permissible. The contactor and/or over-load relay must be replaced if necessary.

Type of coordination "2":

No damage can be tolerated to the overload relay, but contact welding on the contactor is permitted if the contacts can be easily separated.

2) Test conditions acc. to IEC 60 947-4-1.

## 3TF68 and 3TF69 Vacuum contactors

#### Overview

#### Standards

IEC 60947-1, EN 60947-1, IEC 60947-4-1, EN 60947-4-1, IEC 60947-5-1, EN 60947-5-1 (auxiliary switches) The 3TF68/69 contactors are climate-proof.

They are finger-safe according to EN 50274. Terminal covers may have to be fitted onto the connecting bars, depending on the configuration with other devices (see Accessories and Spare Parts on page 2/54).

#### Main contacts

#### Contact erosion indication with 3TF68/69 vacuum contactors

The contact erosion of the vacuum interrupters can be checked during operation with the help of 3 white double slides on the contactor base. If the distance indicated by one of the double slides is < 0.5 mm while the contactor is in the closed position, then the vacuum interrupter must be replaced. To ensure maximum reliability, it is recommended to replace all 3 vacuum interrupters simultaneously.

#### Auxiliary contacts

#### Contact reliability

These auxiliary contacts are particularly suitable for solid-state circuits with currents  $\geq$  1 mA at a voltage  $\geq$  17 V.

#### Technical specifications

## Electromagnetic compatibility

The 3TF68/69....C contactors for AC operation are fitted with an electronically controlled solenoid operating mechanism with a high interference immunity (for EMC values see page 3/115) The solenoid coil is connected to varistors for protection against overvoltages.

Revised 09/22/15

The 3TF68/69..-. Q.. contactors for AC operation are designed for operation in systems with AC control supply voltage which is subject to strong interference. The solenoid systems of these contactors are configured in the DC economy circuit with rectification. The rectifier bridge is connected to varistors for protection against overvoltages.

#### Protection of the main current paths

An integrated RC varistor connection for the main current paths dampens the switching overvoltage rises to safe values. This prevents multiple restricting. It can therefore be assumed that the motor winding cannot be damaged by switching overvoltages with steep voltage rises.

## Note:

During operation in installations in which the emitted interference limits cannot be observed, e.g. when used for output contactors in converters, 3TF68/69...- Q contactors without a main current path circuit are recommended.

Contactor

## 3TF68 and 3TF69 Vacuum contactors

The contact endurance for utilization category AC-12 or AC-15/AC-14 depends mainly on the breaking current. It is assumed that the operating mechanisms are switched randomly, i.e. not synchronized with the phase angle of the supply system.

The characteristic curves apply to 230 V AC.

Contact endurance of the auxiliary contacts

#### 3TF68 and 3TF69

### Contact erosion indication with vacuum contactors

The contact erosion of the vacuum interrupters can be checked during operation with the help of 3 white double slides on the contactor base.

If the distance indicated by one of the double slides is < 0.5 mm while the contactor is in the closed position, the vacuum interrupter must be replaced. To ensure maximum reliability, it is recommended to replace all 3 vacuum interrupters.

Contact endurance of the main contacts

Electromagnetic compatibility (EMC)		See page 2/106.			
Short-circuit protection					
Main circuit Fuse links, gG operational class: LV HRC, type 3NA; DIAZED, type 5SB; NEOZED, type 5SE according to IEC 60947-4-1/EN 60947-4-1					
Type of coordination "1"	A	1000	1250		
• Type of coordination "2"	A	500	630		
• Weld-free <sup>4)</sup>	A	400	500		
Auxiliary circuit					
<ul> <li>Short-circuit test with fuse links of gG operational class: LV HRC, type 3NA; DIAZED, type 5SB; NEOZED, type 5SE with I<sub>k</sub> = 1 kA acc. to IEC 60947-5-1</li> </ul>	A	10			
• Test with miniature circuit breaker up to 230 V with C characteristic: Short-circuit current $I_{\rm k}=400$ A acc. to IEC 60947-5-1	A	10			

1) To easily replace the laterally mounted auxiliary switches it is recommended to maintain a minimum distance of 30 mm between the contactors.

 2) If mounted at a 90° angle (conducting paths are horizontally above each other), the switching frequency is reduced by 80% compared with the normal values.

<sup>3)</sup> See "Endurance of the auxillary contacts", page 2/173.

4) Test conditions according to IEC 60947-4-1.

<sup>5)</sup> For ambient temperatures > 55°C, only 3TF6.33-.Q..-Z A02 contactors (= without connection of the main current path circuits) can be used.

Then derating is also possible with these contactors: - AC-1:  $I_e = 782$  A, 644 operating cycles/h; - AC-3: operating range 0.85-1.05 x Us, 460 operating cycles/hour, mechanical endurance 5 million operating cycles, lateral clearance 10 mm

## **3TC contactors**

#### Overview

#### 3TC4 and 3TC5

IEC 60947-1, EN 60947-1, IEC 60947-4-1, EN 60947-4-1

The contactors are finger-safe according to EN 50274. Terminal covers may have to be fitted onto the connecting bars, depending on the configuration with other devices.

The DC motor ratings given in the tables are applicable to the DC-3 and DC-5 utilization categories with two-pole switching of the load or with the two conducting paths of the contactor connected in series.

One contactor conducting path can switch full power up to 220 V. The ratings for higher voltages are available on request.

#### 3TC7

IEC 60947-4-1, EN 60947-4-1.

The contactors are suitable for use in any climate. They are suitable for switching and controlling DC motors as well as all other DC circuits.

The solenoid excitation is configured for a particularly large operating range. It is between 0.7 or 0.8 to 1.2  $\,$  x  $U_{\rm s}.$ 

3TC74 contactors can be used at up to 750 V/400 A and 50 Hz in AC-1 operation.

### Application

The contactors are suitable for switching and controlling DC motors as well as all other DC circuits.

A version with an especially large coil operating range is available for operation in electrically driven vehicles and in switchgears with significant fluctuations in the actuating voltage

Control Relays 3RH2 control relays size S00

### Technical specifications

Contactor relays Type	3RH2
Size Size	\$00
The contactor relays are designed for operation on a	
vertical mounting surface.	360° 22.5° 22.5° 22.5° 22.5°
Upright mounting position	NSB0_00477a Special version required (3RH21 22-2K.40 coupling relays and contactor relays with extended operating range on request)
Positively-driven operation of contacts in contactor relays	
3BH2:	Explanations:
Yes, in the basic unit and the auxiliary switch block as well as between the basic unit and the front-mounted auxiliary switch block (removable) acc. to:	There is positively-driven operation if it is ensured that the NC and NO con- tacts cannot be closed at the same time.
• IEC 60947-5-1, Appendix L	<b>ZH1/457</b> Safety Rules for Controls on Power-Operated Metalworking Presses.
<ul> <li>3RH22:</li> <li>Yes, in the basic unit and the auxiliary switch block as well as between the basic unit and the snap-on auxiliary switch block (permanently mounted) acc. to:</li> <li>ZH 1/457</li> <li>IEC 60947-5-1, Appendix L</li> </ul>	IEC 60947-5-1, Appendix L Low-Voltage Controlgear, Controls and Contact Blocks. Special requirement for positively-driven contacts
<u>Note:</u> 3RH29 11NF. solid-state compatible auxiliary switch blocks have no positively-driven contacts.	
Contact reliability	
Contact reliability at 17 V, 1 mA acc. to IEC 60947-5-4	Frequency of contact faults $< 10^{-8}$ i.e. $< 1$ fault per 100 million operating cycles
Contact endurance for AC-15/AC-14 and DC-13 utilization categories	
The contact endurance is mainly dependent on the breaking current. It is assumed that the operating mechanisms are switched randomly, i.e. not synchronized with the phase angle of the supply system. If magnetic circuits other than the contactor coil systems or solenoid valves are present, e.g. magnetic brakes, protective measures for the load circuits are necessary, e.g. in the form of RC elements and free-wheel diodes. The characteristic curves apply to: • 3RH21/3RH22 contactor relays • 3RH24 latched contactor relays • 3RH29 11 auxiliary switch blocks <sup>1)</sup> • Auxiliary switch blocks for snapping onto the front, max. 4-pole and for mounting onto the side in size S00	30         NSB0_02061a           10         5           30         Basic unit           0,5         0,5           0,1         0,5           0,1         0,5           0,1         0,5           0,1         0,1           0,01         0,03 0,05         0,1           0,01         0,03 0,05         0,1         0,3           1/e -DC-13         1/e -DC-13         1/e -DC-13           1/e -DC-13         1/e -DC-13         1/e -DC-13

### **3RT Contactors**

### 3RT2 and 3RH2 contactors and relays

### Terminal designations and identification numbers for auxiliary contacts **Terminal designations**

The terminal designations are 2-digit, e.g. 13, 14, 21, 22:

- Tens digit: Sequence digit
  - Related terminals have the same sequence digit
- Units digit: Function digit
  - 1-2 for normally closed contacts (NC)
  - 3-4 for normally open contacts (NO)

### **Identification numbers**

The identification number indicates the number and type of the auxiliary contacts, e.g. 40, 31, 22, 13:

- 1st digit: number of normally open contacts (NO)
- 2nd digit: number of normally closed contacts (NC) Examples:

• 31 = 3 NO + 1 NC

• 40 = 4 NO

### Selection guide for mountable auxiliary switch blocks for power contactors and contactor relays

The auxiliary switch blocks of the 3RH29 series for mounting on Where the columns and lines intersect (blue and green in the the front and side can be used for power contactors as well as for contactor relays.

example) you will find the identification number for the combination of basic unit (column) and auxiliary switch block (line).

The possible combinations of basic unit and mounted auxiliary switch block can be found in the tables below.

#### 3RT20 3 contactors

Size S2 and NEMA Size 2, screw connection with surge suppressor, auxiliary switch blocks and mounted overload relay

For specific dimensions, 2D / 3D CAD files and technical data, please visit www.siemens.com/cax

#### For size S2:

a = 0 mm with varistor < 240 V, diode assembly

SIRIL

Revised

09/22/15

- a = 3.5 mm with varistor > 240 V a = 17 mm with RC element
- b = DC 15 mm deeper than AC

1) Auxiliary switch block, laterally mountable

- 2) Auxiliary switch block, mountable on the front
- (1, 2 and 4-pole)3) Surge suppressor4) Drilling pattern

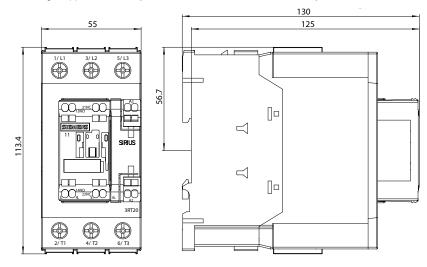

### Dimension drawings

3RT10 4, 3RT14 46 contactors

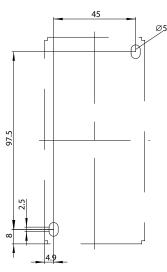

Size S3 and NEMA Size 3, screw connection

3RT20 3 contactors

Size S2, Spring-type terminal connection with surge suppressor, auxiliary switch blocks and mounted overload relay

For specific dimensions, 2D / 3D CAD files and technical data, please visit www.siemens.com/cax

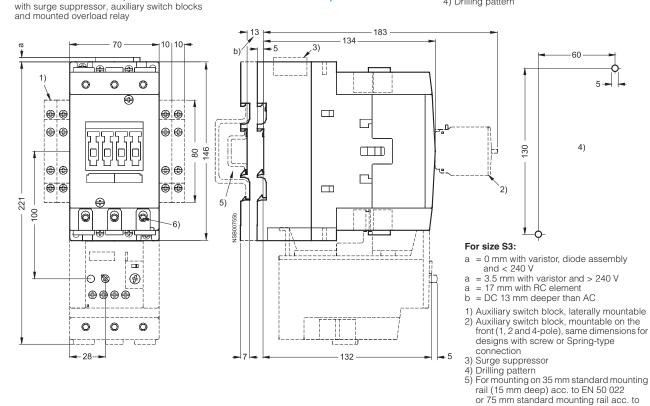

For size S2:

- a = 0 mm with varistor < 240 V, diode assembly a = 3.5 mm with varistor > 240 V
- = 17 mm with RC element а
- b = DC 15 mm deeper than AC
- Auxiliary switch block, laterally mountable
- 2) Auxiliary switch block, mountable on the front (1, 2 and 4-pole)
- 3) Surge suppressor
- 4) Drilling pattern

EN 50 023

6) Hexagon socket screw 4 mm

For specific dimensions, 2D / 3D CAD files and technical data, please visit www.siemens.com/cax

### 2/211

### Lateral clearance from

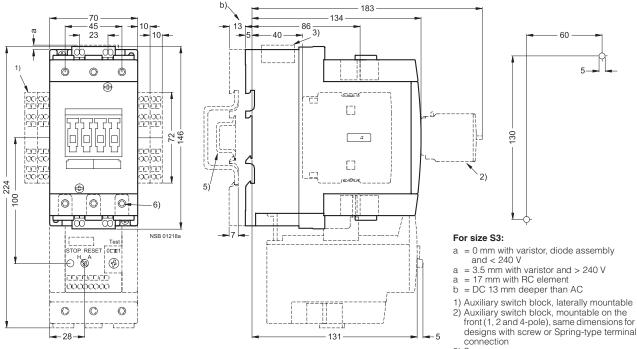

earthed parts = 6 mm

### **3RT10** contactors, 3-pole

### Dimension drawings

### 3RT10 4 contactors,

Size S3, Spring-type terminal connection with surge suppressor, auxiliary switch blocks and mounted overload relay

For specific dimensions, 2D / 3D CAD files and technical data, please visit www.siemens.com/cax

- 2) Auxiliary switch block, mountable on the
- designs with screw or Spring-type terminal connection
- 3) Surge suppressor4) Drilling pattern
- 5) For mounting on 35 mm standard mounting rail (15 mm deep) acc. to EN 50 022 or 75 mm standard mounting rail acc. to
  - EN 50 023
- 6) Hexagon socket screw 4 mm

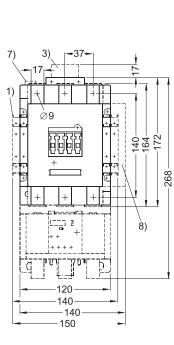

### 3RT10 and 3RT14 contactors, 3-pole

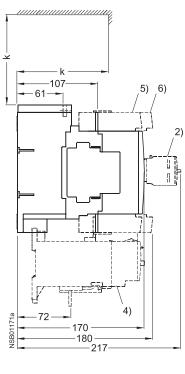

#### Dimension drawings

### 3RT10 5, 3RT14 5 contactors Size S6 and NEMA Size 4

with auxiliary switch block, laterally mountable and mountable on the front, mounted overload relay and box terminals,

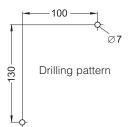

laterally mounted electronics module with remaining lifetime indication

For specific dimensions, 2D / 3D CAD files and technical data, please visit www.siemens.com/cax

Clearance from earthed parts with directly mounted overload relay: lateral: 10 mm front: 20 mm

#### For size S6:

- k = 120 mm (minimum clearance for removing the withdrawable coil)
- 1) Second auxiliary switch block, laterally mountable 2) Auxiliary switch block, mountable on the front

- 3) RC element
  4) 3RB10 overload relay, mounted
  5) 3RT19 55-4G box terminal block
- (hexagon socket 4 mm) 6) 3RT19 56-4G box terminal block
- (hexagon socket 4 mm)
  7) PLC connection DC 24 V and changeover switch (with 3RT1...-.N)
- 8) Electronics module with remaining lifetime indication (auxiliary switch block not mountable on righthand side)

### 3RT10 and 3RT14 contactors, 3-pole

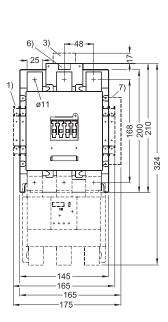

### Dimension drawings

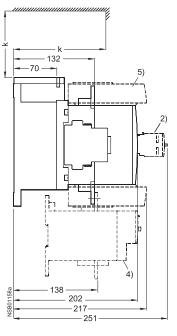

#### 3RT10 6, 3RT14 6 contactors

#### Size S10

with auxiliary switch block, laterally mountable and mountable on the front, mounted overload relay and box terminals,

laterally mounted electronics module with remaining lifetime indication

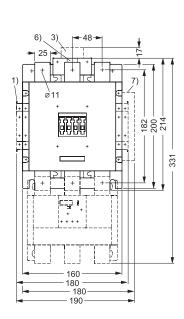

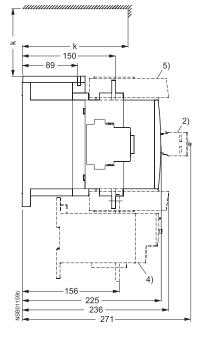

# 120 'n٩ Drilling pattern 80 -0-

### 3RT10 7, 3RT14 7 contactors Size S12

with auxiliary switch block, laterally mountable and mountable on the front, mounted overload relay and box terminals,

laterally mounted electronics module with remaining lifetime indication

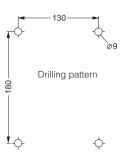

For specific dimensions, 2D / 3D CAD files and technical data, please visit www.siemens.com/cax

#### For sizes S10 and S12: Clearance from earthed parts with directly mounted

overload relay: lateral: 10 mm front: 20 mm

### For sizes S10 and S12:

- k = 150 mm (minimum clearance for removing the withdrawable coil)
- Second auxiliary switch block, laterally mountable
   Auxiliary switch block, mountable on the front
   RC element

- 4) 3RB10 overload relay, mounted
- 6) Box terminal block (hexagon socket 6 mm)
  6) PLC connection DC 24 V and changeover switch (with 3RT1...-.N)
- 7) Electronics module with remaining lifetime indication (auxiliary switch block not mountable on righthand side)

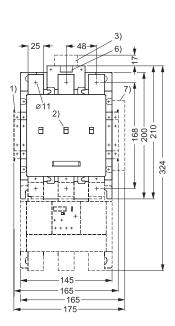

### **3RT12 vacuum contactors, 3-pole**

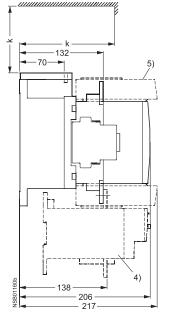

### Dimension drawings

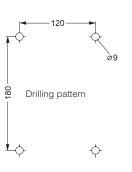

### 3RT12 6 vacuum contactors

Size S10 with auxiliary switch block, laterally mountable, mounted overload relay and box terminals, laterally mounted electronics module with remaining lifetime indication

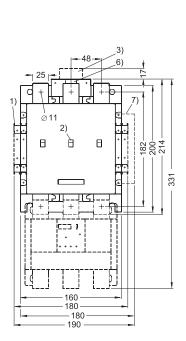

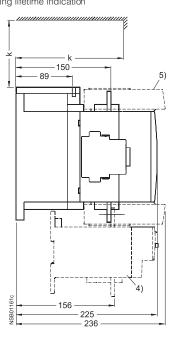

Detail Contact erosion indicator for vacuum interrupters

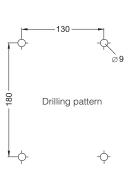

### 3RT12 7 vacuum contactors Size S12

with auxiliary switch block, laterally mountable, mounted overload relay and box terminals, laterally mounted electronics module with remaining lifetime indication

For specific dimensions, 2D / 3D CAD files and technical data, please visit www.siemens.com/cax

#### For sizes S10 and S12:

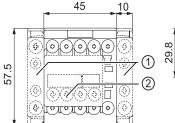

- k = 150 mm (minimum clearance for removing the withdrawable coil)
- Second auxiliary switch block, laterally mountable
   Position and contact erosion indicator
- 3) RC element
- 4) 3RB10 overload relay, mounted
- 5) Box terminal block (hexagon socket 6 mm)
  6) PLC connection DC 24 V and changeover switch
- (with 3RT1...-.N) Electronics module with remaining lifetime indica-7) tion (auxiliary switch block not mountable on righthand side)

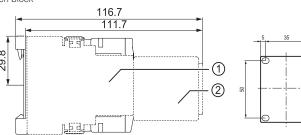

### 3RT13/23 and 3RT15/25 contactors, 4-pole

### Dimension drawings

#### 3RT23 1 and 3RT25 1 contactors Size S00, screw connection

with surge suppressor and auxiliary switch block

### SIRIUS Revised 09/22/15

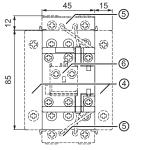

### Lateral clearance from earthed parts = 6 mm

### For size S00:

1) Laterally mountable auxiliary switch block 3RH2911-1DA.. / -1DE.. / -1EE. 2) Auxiliary switch block for

mounting on the front 3RH2911-1FA.. / -1GA.. / -1HA.. / -1NF..

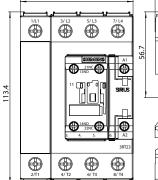

### 3RT23 2 and 3RT25 2 contactors Size S0 with coil terminal module and auxiliary switch block
